

SCM6/1 front view

Features

- > **PRIMARY APPLICATION:** the changeover system integrates the fundamental function of automatic changeover across main and spare transmitters so that it guarantee utmost continuous service.
- > **CHANGEOVER FEATURES:** the operating principles of **RVR** changeover systems for "6+1" consist in automatic changeover that takes place across many transmitters (up to 6) and a spare one. **RVR** designs and manufactures other accessories to be matched with the use of changeover system. These devices are specifically used for changeover and remote control of L & R audio (AUD6/1), MPX & RDS (RDS6/1) and AES/EBU signals (AES6/1).
- > **HARDWARE FEATURES:** the changeover system is housed in lightweight and rugged stainless steel rack cases having the dimension of 4 HE.
- > **USER-FRIENDLY FEATURES:** the front panel features many leds that indicate instant system status to the operator. Moreover, the user-friendly HMI with graphic display ensures prompt reading and setting up of all operating parameters. It is possible to control and vary any system setting through a simple knob (encoder).
- > **EASE OF MANTENANCE:** the changeover system is assembled using modules and boards with connectors so that it is easy to remove, replace and add modules and boards.
- > **INTERFACE CONTROL:** the rear panel features all connectors that could be used to connect the equipment to the various components of the stations.
- > **REGULATORY COMPLIANCE:** the changeover system comply with EC, FCC and CCIR standards.

Caratteristiche

- > **PRIMARY APPLICATION:** il sistema di scambio integra la fondamentale funzionalità di scambio automatico tra trasmettitori principali e di riserva, al fine di garantire la massima continuità di servizio.
- > **CHANGEOVER FEATURES:** i principi di funzionamento del sistema di scambio per "6+1" consiste nello scambio automatico che avviene tra più trasmettitori (fino a 6) ed uno di riserva. **RVR** ha progettato e produce altri accessori da affiancare all'utilizzo dello scambiatore. Questi apparati sono utilizzati specificatamente per lo scambio ed il controllo remoto di segnali audio L & R (AUD6/1), MPX & RDS (RDS6/1) e AES/EBU (AES6/1).
- > **HARDWARE FEATURES:** il sistema di scambio è realizzato in contenitore rack in acciaio inox incredibilmente leggero e robusto in dimensioni di 4 HE.
- > **USER-FRIENDLY FEATURES:** sul pannello frontale sono presenti una serie di indicatori led per un'immediata comprensione dello stato del sistema. Inoltre per tutti i modelli in produzione, un'interfaccia utente di facile comprensione a display grafico, permette la lettura e l'impostazione dei parametri di funzionamento. Per mezzo di una semplice manopola (encoder), è possibile controllare e modificare le impostazioni dell'intero sistema.
- > **EASE OF MANTENANCE:** il sistema di scambio è interamente assemblato con moduli e schede provvisti di connettori ad innesto, che consentono una facile rimozione, sostituzione ed aggiunta degli stessi.
- > **INTERFACE CONTROL:** sul pannello posteriore sono presenti tutti i connettori utilizzabili per i collegamenti degli apparati ai vari componenti delle stazioni.
- > **INTERFACE CONTROL:** il sistema di scambio rispetta ed è conforme alle normative EC, FCC e CCIR.

Redundant transmitters system

> "6+1" Active system transmitters

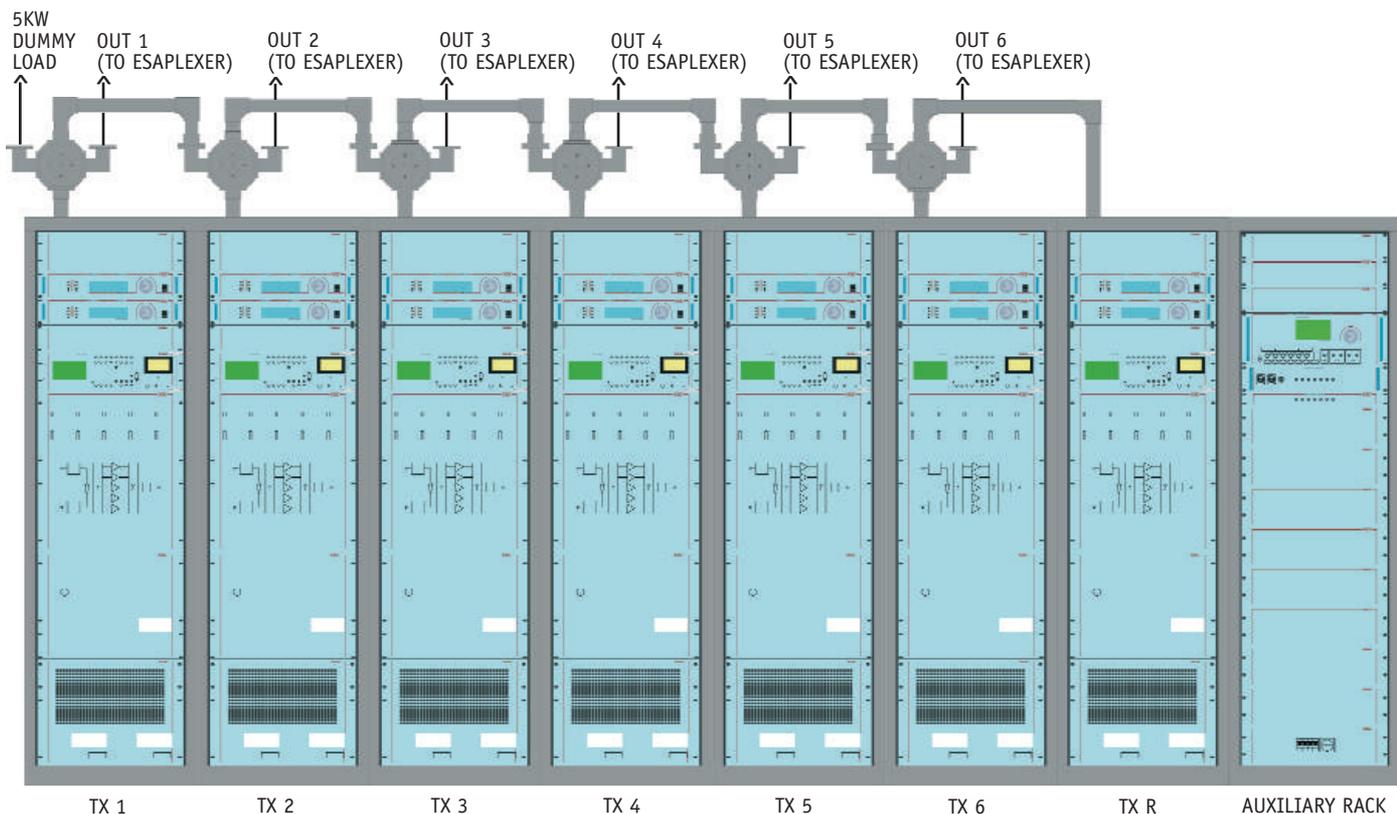

This system is composed of "N" transmitters connected to the antenna and 1 transmitter used as back-up unit that is connected to the dummy load.

In case one of the "N" transmitters fails **it is immediately replaced with the back-up unit** and the faulty unit is switched to the dummy load.

TX 5kw Plug-in "6+1 Backup System front view

The basic operations in a N+1 back-up system is identical to the 1+1 system plus those functions that are typical of this system:

- the power alarm is detected
- it activates both Interlocks on the faulty transmitter and on the backup unit
- it controls the coaxial relay transferring the faulty TX on the dummy load and the back-up TX on the antenna
- it sets the same frequency of the faulty transmitter on the back-up unit
- it switches the audio matrix from the faulty transmitter to the back-up unit

- it switches the RDS matrix
- it switches the interlock matrix in order to release the interlock of the load on the TX connected to the load and the interlock of the combiner on the back-up unit
- it turns on the back-up unit

Other functions are:

- Local/Remote
- Normal/Automatic
- parameter management
- timing management
- interface among the telemetry systems
