

TX20000U-KLC

User & Technical Manual

Rev.2.0

EC Declaration of conformity

R.V.R. Elettronica S.p.A. declares that this transmitter is in conformity to the essential requirements and to other relevant regulations settled by the 1999/5/CE directive.

Validity of the EC declaration of conformity.

WARNING: the conformity of this product is not valid if the product is used in conditions not authorized by R.V.R. Elettronica as described in the user manual.

Examples of conditions in which the conformity is not valid (indicative list):

The connection between the exciter and the amplifier (i) indicated in the present document is not done properly;

The components used are different from those used and recommended by R.V.R. Elettronica S.p.A.;

The additional devices used are not suitable and/or are generating signals which are not suitable to those supported by the product;

The product is used in operative conditions different from the normal working conditions for which the product was designed (temperature, humidity, supply voltage, ...);

Any modification on parts of the product without any prior authorization from R.V.R. Elettronica S.p.A..

Limitations for the use of the product in the EEC member countries.

This product is a radio transmitter for FM broadcasting .

It can work on operative frequencies which are not harmonized in the EEC member countries.

Whoever uses this product, should obtain the authorization from the spectrum local administrative authority before starting using it.

The user is responsible for the configuration of the working frequency, the output power, and for the other characteristics of the installation to which the transmitter described in the present documentation is part of, in order to respect the limitations described in the authorization received by the competent local authority.

Waste Electrical or Electronic Equipment (WEEE)

This symbol indicates that you should not discard waste electrical or electronic equipment (WEEE) in the trash. For proper disposal, contact your local recycling/reuse or hazardous waste center.

CAUTION

Do not discard waste electrical or electronic equipment (WEEE) in the trash. For proper disposal, contact your local recycling/reuse or hazardous waste center.

1. Introduction

This manual describes the TX20000U-KLC, a solid-state RF amplifier designed for frequency modulation sound broadcasting, manufactured by **R.V.R. Elettronica S.p.A.**. A control system for the exciters is built into the machine so that in order to have a system with redundant exciters, all that needs to be done is to include two exciters in the transmitter such as, for example, the PTX30LCD exciters made by R.V.R. Elettronica S.p.A.

This manual is written as a general guide for those having previous knowledge and experience with this kind of equipment, well conscious of the risks connected with the operation of electrical equipment.

It is not intended to contain a complete statement of all safety rules which should be observed by personnel in using this or other electronic equipment.

The installation, use and maintenance of this piece of equipment involve risks both for the personnel performing them and for the device itself, that shall be used only by trained personnel.

R.V.R. Elettronica S.p.A. doesn't assume responsibility for injury or damage resulting from improper procedures or practices by untrained/unqualified personnel in the handling of this unit.

Please observe all local codes and fire protection standards in the operations of this unit.

WARNING: always disconnect power before opening covers or removing any part of this unit. Use appropriate grounding procedures to short out capacitors and high voltage points before servicing.

WARNING: this device can irradiate radio frequency waves, and if it's not installed following the instructions contained in the manual and local regulations it could generate interferences in radio communications.

In a residential place this equipment can cause hash. In this case can be requested to user to take the necessary measures.

R.V.R. Elettronica S.p.A. reserves the right to modify the design and/or the technical specifications of the product and this manual without notice.

2. Warranty

Any product of R.V.R. Elettronica is covered by a 24 (twenty four) month warranty.

For components like tubes for power amplifiers, the original manufacturer's warranty applies. R.V.R. Elettronica S.p.A. extends to the original end-user purchaser all manufacturers warranties which are transferable and all claims are to be made directly to R.V.R. per indicated procedures.

Warranty shall not include:

- 1 You damn that are verified each other during the consignment of the machine to the R.V.R. for possible reparations;
- 2 Any unauthorized repair/modification;
- 3 Incidental/consequential damages as a result of any defect;
- 4 Nominal non-incidental defects
- 5 Re-shipment costs or insurance of the unit or replacement units/parts

Any damage to the goods must be reported to the carrier in writing on the shipment receipt.

Any discrepancy or damage discovered subsequent to delivery, shall be reported to **R.V.R. Elettronica** within 5 (five) days from delivery date.

To claim your rights under this warranty, you should follow this procedure:

- 1 Contact the dealer or distributor where you purchased the unit. Describe the problem and, so that a possible easy solution can be detected.
- 2 Dealers and Distributors are supplied with all the information about problems that may occur and usually they can repair the unit quicker than what the manufacturer could do. Very often installing errors are discovered by dealers.
- 3 If your dealer cannot help you, contact R.V.R. Elettronica and explain the problem. If it is decided to return the unit to the factory, R.V.R. Elettronica will mail you a regular authorization with all the necessary instructions to send back the goods.
- 4 When you receive the authorization, you can return the unit. Pack it carefully for the shipment, preferably using the original packing and seal the package perfectly. The customer always assumes the risks of loss (i.e., R.V.R. is never responsible for damage or loss), until the package reaches R.V.R. premises. For this reason, we suggest you to insure the goods for the whole value. Shipment must be effected C.I.F. (PREPAID) to the address specified by R.V.R.'s service manager on the authorization
- 5 DO NOT RETURN UNITS WITHOUT OUR AUTHORIZATION AS THEY WILL BE REFUSED
- 6 Be sure to enclose a written technical report where mention all the problems found and a copy of your original invoice establishing the starting date of the warranty.

Replacement and warranty parts may be ordered from the following address. Be sure to include the equipment model and serial number as well as part description and part number.

R.V.R. Elettronica SpA

3. First Aid

The personnel employed in the installation, use and maintenance of the device, shall be familiar with theory and practice of first aid..

3.1 Treatment of electrical shocks

3.1.1 If the victim is not responsive

Follow the A-B-C's of basic life support

- Place victim flat on his back on a hard surface
- Open airway: lift up neck, push forehead back (Fig. 3-1).
- Clear out mouth if necessary and observe for breathing
- if not breathing, begin artificial breathing (Figure 3-2): tilt head, pinch nostrils, make airtight seal, four quick full breaths. Remember mouth to mouth resuscitation must be commenced as soon as possible

Figura 3-1

Figura 3-2

- Check carotid pulse (Fig 3-3); if pulse is absent, begin artificial circulation (Fig. 3-4) depressing sternum (Fig. 3-5)

Figura 3-3

Figura 3-4

Figura 3-5

- In case of only one rescuer, 15 compressions alternated to two breaths.
- If there are two rescuers, the rhythm shall be of one breath each 5 compressions.
- Do not interrupt the rhythm of compressions when the second person is giving breath.
- Call for medical assistance as soon as possible.

3.1.2 If victim is responsive

- Keep them warm
- Keep them as quiet as possible
- Loosen their clothing (a reclining position is recommended)
- Call for medical help as soon as possible

3.2 Treatment of electrical Burns

3.2.1 Extensive burned and broken skin

- Cover area with clean sheet or cloth
- Do not break blisters, remove tissue, remove adhered particles of clothing, or apply any salve or ointment.
- Treat victim for shock as required.
- Arrange transportation to a hospital as quickly as possible.
- If arms or legs are affected keep them elevated

If medical help will not be available within an hour and the victim is conscious and not vomiting, give him a weak solution of salt and soda: 1 level teaspoonful of salt and 1/2 level teaspoonful of baking soda to each quart of water (neither hot or cold). Allow victim to sip slowly about 4 ounces (half a glass) over a period of 15 minutes. Discontinue fluid if vomiting occurs.

DO NOT give alcohol

3.2.2 Less severe burns

- Apply cool (not ice cold) compresses using the cleansed available cloth article.
- Do not break blisters, remove tissue, remove adhered particles of clothing, or apply salve or ointment.
- Apply clean dry dressing if necessary.
- Treat victim for shock as required.
- Arrange transportation to a hospital as quickly as possible
- If arms or legs are affected keep them elevated.

4. General Description

The TX20000U-KLC is a RF amplifier for frequency modulation sound broadcasting. It is a fully solid-state apparatus of modern design that uses MOSFET as active components in the FM amplifying modules, and for the cooling it uses of the coolant rather than forced air. This chapter briefly describes the machine's main features.

4.1 Composition

The TX20000U-KLC transmitter is made up of modules inserted in a 19" rack. The main apparatuses are:

- 4 RF amplifier modules at 5 kW nominal
- 1 Control unit called Common control unit (CCU)
- 3 Hybrid coupler -3dB
- 3 Dummy load
- 1 Cart pumps
- 1 External unit (radiator)

In configuration standard it comes supplied with Rack from 40 unit (you see design).

EXTERNAL UNIT

4.2 Technical specifications

Frequency range	87.5 - 108.0 MHz
Nominal RF power	20000 - 21000 W
Power supply voltage	220/380V Threephase, 3F+N
RF power output connector size	3-1/8" with EIA flange
Exciting power	Max. 30 W
Consumption	28.5 Kw
Power factor	0.98
Weight transmitter	570 Kg
Weight external unit	62 Kg (empty), 74 Kg (with coolant)

The transmitter it comes supplied with:

- 2 Flexible hydraulic tubes from 1" of length 6 meters for the connection of transmitter and external unit (except various demand for the customer).
- 2 Cables electrical workers of the same length of those hydraulic engineers for the supply and signals of alarm of the external unit.
- 42 liters of coolant in order to fill up the transmitter and the radiator (the apparatus comes supplied without coolant in the circuit).
- 3 brackets for the implantation to the wall of the external unit.

5. Common control unit (CCU)

The operator controls and checks the status of the TX20000U-KLC by means of the common control unit (CCU).

Three control groups are present on this unit:

- LCD and scroll buttons

• Buttons, selector switches and LEDs

• Phase ADJ

5.1 LCD Display

The operator uses the control software of the transmitter by means of a series of menus that are displayed on the LCD. Four specific keys are provided for scrolling through the menus, performing the settings and giving the commands:

Pulsante	Descrizione
OK	Click this button to access a sub-menu, to enter the editing mode or to confirm a modified value.
ESC	Click this button to exit from a menu or to cancel the modification of a value.
	Click this button to scroll inside a menu (to the right or down) or to reduce the value of a parameter being modified.
	Click this button to scroll inside a menu (to the left or up) or to increase the value of a parameter being modified.
	Trimmer for the regulation of the contrast of display the LCD

When the operator is not using the various buttons to navigate, the LCD displays the preset screenful that shows the “Output Power” that it indicates the forward and reflected output power (Figure 5-1).

As indicated on the preset screenful, push the ESC button to access at the “Overall Status” menù (Figure 5-2).

Figure 5-1

5.1.1 Overall Status Menù

This menu includes only indications, therefore the user cannot insert any input in its different lines.(Figure 5-2).

Menù Line	Description
Timer (when enabled)	Indication of the start and stop times of the automatic power reduction feature - see “Settings” menù
Control unit	Status of the control unit (Off or On) and indication of the exciter actually connected to the amplifier (Exct.1 or Exct.2)
Cooling	Status of the pumps board
R.F. Combiner	Status of the RF combiner
R.F. Unit - N	Status of the Rf power amplifier number N (1° from the top)
Hours	Timer counting the hours of operation of the transmitter. For example, this indication is useful in order to define when a maintenance operation can be made

By pressing the Esc key as indicated on the last line, you can shift to the exchange screen from which you can have access to the “Select” menù (Figure 5-3).

Note: All modules RF must be in REMOTE otherwise will come visualized “Time-out”. If from LOCAL it is passed REMOTE, will have to pass approximately 30/40 sec. before being able to visualize the relative state.

5.1.2 Select menù

This is the exchange menu from which you can select the different sub-menus that compose the software.(Figure 5-3).

In order to enter a sub-menu, select the correspondent line with the arrow buttons and press OK key.

Menu Line	Description
Control unit	General status of the TX20000U-KLC
Cooling	Status of the cooling
R.F. Combiner	Status of the RF combiner
R.F. Units	Status of the RF power amplifiers
Alarms	Summary of the occurred alarms
Service	Service menu for the switching on/off of the modules
Settings	Setting of the parameters (i.e. Power levels)
Exciters	Parameters of the exciters (i.e. output power, on air exciter)
Info	Information concerning the configuration of the TX20000U-KLC
Release	Information concerning the hardware and software versions of the modules composing the unit
Modem	Settings related to the optional telemetry system

To return to the predefined menu press key ESC many times.

Figura 5-3

5.1.3 Control Unit menù

Informative menu on the inputs and the outputs of the CCU of the machine.(Figure 5-4).

Menu Line	Description
Ext Intl	Input status "external interlock" (JP4/4 parallel interface)
Aux Intl	Input status "auxiliary interlock" (JP4/5)
Exc1 A.Audio	Input status "audio alarm exciter 1" (JP4/8)
Exc2 A.Audio	Input status "audio alarm exciter 2" (JP4/9)
L.P. Timer	Input status of the modality of automatic reduction of the power

Reserve 2	Input status "Reserve 2" (JP8/3)
Reserve 3	Input status "Reserve 3" (JP8/4)
Reserve 4	Input status "Reserve 4" (JP8/5)
Relay Exc	Exciters exchange relay status (Off = exciter 1 on air)
Exc-1 Mute	Exciter 1 interlock status (Off = RF power enabled)
Exc-2 Mute	Exciter 2 interlock status (Off = RF power enabled)
Audio Alarm	Output Audio Alarm status (JP47/1)
Exc's Mains	Exciters power supply status (On = power supply enabled)
Stand_by (In)	"Stand by" input line status
Stand_by (Out)	"Stand by" output line status from the control unit
Total Eff	Total efficiency of the machine

Figure 5-4

5.1.4 Menù Cooling

informative menu of cooling of the machine (Figure 5-5).

Menu Line	Description
Air	Temperature inside to the machine
Safety	Status of the safety arrest button. On indicates the functioning is enabled, Alr means the unit was arrested through the button
Mains	Status of the main voltage supply. Ok indicates the presence of all phases and that their sequence is corrected, Alr means that it must verify the presence of all phases, their sequence or the fuse of one or more phases, to protection of the threephase control *
C.B. Low	Indicates the state of 1° thermostat of the coolant
C.B. High	Indicates the state of 2° thermostat of the coolant (only in the transmitter TX15000U-KLC or higher)
C.B. Rack	Indicates the state of the thermostat of temperature inside to the machine
H2o Level Min	Indicates the level of the water in the tank of the external unit. Alr means that the water has reached the minimum level
H2o Level Low	Indicates the level of the water in the tank of the external unit. Alr means that the tank is empty and implies the immediate shutdown of the machine

Flux	Indicates if there is a corrected flow of the coolant
H2o Pressure	Indicates if the pressure of the coolant in the circuit is in the range of admitted values. Alr means that the pressure is excessive
Blower-1	It indicates the state of the fan of the external unit
Blower-2	It indicates the state of the 2° fan of the external unit (only in the transmitter TX15000U-KLC or higher)
Blower R	It indicates the state of the fan of aspiration positioned on the top of the machine
Pump-1	Indicates the state of the N°1 pump
Pump-2	Indicates the state of the N°2 pump

Change Pump <Ok>: pressing key OK it is possible manually switch the pump in function at the moment. The minimal time between an exchange and an other is of 120 sec.

The pump is exchanged automatically every time you switch off and subsequently re-switch the CCU. In case you never switch off the CCU, the pump is exchanged automatically every 10 days of normal operation.

The operation of pumps exchange is necessary for the regular functioning of the same.

In case of a fault on pump pressure, and then an interruption of the cooling flow, after 10 seconds is recorded by the machine which starts the operations of exchange pumps.

Note: the delay of 10 seconds is necessary to prevent the record of false positives as a momentary pressure drop due to air bubbles in the cooling system.

The machine will continue to exchange the pumps every two minutes, until the situation that caused the alarm is resolved.

After six minutes the equipment goes in a WAIT condition, and will be reported through the yellow LED on the front, in the meanwhile the machine will continue to exchange pumps every 2 minutes in order to resolve the alarm condition.

If the alarm PRESS intervene, the transmitter should be in conditions of FAULT (transmitter will not transmit more power) and this will be reported through the red LED on the front of the machine. Only the intervention of an operator or a reset by telemetry, can unlock the transmitter. If the problem remains, after 60 sec. return to FAULT.

Note: Please resolve as soon as possible the condition that brought the equipment to the alarm, this to restore the correct operation.

Note: Please resolve as soon as possible replacing the faulty pump.

* The threephase control and the relative fuses are found near the input terminals on the top of the machine.

Figure 5-5

5.1.5 Menù R.F. Combiner

This menu contains the information related to the RF part of the complete transmitter. (Figure 5-6).

Menu Line	Description
Fwd	Overall emitted RF power of the transmitter
Rfl	Reflected RF power of the antenna
Fwd (External)	Forward power of an external transmitter (when configured for this function)
C.B. Kdj 1-10	Temperature sensor of the dummy load. Alr indicates an excessive temperature
C.B. Kdj-M	Temperature sensor of the dummy load (big load) Alr indicates an excessive temperature (only in the transmitter TX20000U-KLC)
Ext.Alarm	External alarm for future protections
S.W.R.	Standing Wave Ratio, calculated by the Control Unit on the basis of the measured forward and reflected power
Main Exc	Output power of the exciter currently on air (the one connected to the input of the RF modules)
Stby Exc	Output power of the exciter currently on the internal dummy load
Blower.Kdj	Status of the output for kdj fan (dummy load)
Blower.C	Status of the output for extraction air fan
PWG1 Fwd.P	Status of the output "PWG1". See the Settings Menu
PWG2 Fwd.P	Status of the output "PWG2". See the Settings Menu
PWG3 Rfl.P	Status of the output "PWG3". See the Settings Menu
PWG4 Rfl.P	Status of the output "PWG4". See the Settings Menu

In the angle low to right of the display the symbol is present  this means that

an ulterior relative page to this menu is available (Figure 5-7), that it is possible to visualize using the key-arrow.

Menu Line	Description
Power: Kdj-1	Foward RF power on dummy load n°1
Temp:	Temperature of the dummy load n°1
Power: Kdj-2	Foward RF power on dummy load n°2

Temp: Kdj-2	Temperature of the dummy load n°2
Power: Kdj-M	Foward RF power on dummy load n°3 (big load)
Temp: Kdj-M	Temperature of the dummy load n°3 (big load)

Figure 5-6

Figure 5-7

5.1.6 R.F. Units menù

Information menu showing the status of the RF power amplifier modules. (Figure 5-8). It is composed of 2 screens, one for each module, that can be scrolled using the arrow buttons.

Menu Line	Description
Fwd	Measurement of the forward power of the amplifier module
Rfl	Measurement of the reflected power of the amplifier module
Input	Measurement of the driving power at the input of the amplifier module
V.P.A.	Measurement supply voltage of the module (generated from the switching power supply included in each module)
Bias.V	Polarization voltage of the mosfet
Temp	Module temperature
Driver.I	Measurement of the current absorbed by the preamplifier stage
Eff	Efficiency of the amplifier module
Temp (Input)	Temperature alarm
Fuse	Status of the fuses of the RF module
MOS-N (1-8)	Measurement of the current absorbed by the MOS N amplifier module (each RF module contains 8 MOS modules)
RF-Enb	Enabled of power distribution from part of the module

Figure 5-8

Nota: All modules RF must be in REMOTE otherwise will not see any parameters. If from LOCAL it is passed REMOTE, will have to pass approximately 30/40 sec. before being able to visualize the relative state.

5.1.7 Alarms menù

This screen describes all the registered events which are relevant to determine the probable causes of any dysfunction. The screen is composed of a variable number of pages (up to 10) in function of the number of events occurred (Figure 5-9). The last events in chronological order are shown in the first page and so on. To shift to the different pages, use the arrow buttons

It is not possible to cancel the alarms visualized in this menu if not by personal RVR

Menu Column	Description
Unit	Module of the system which generated the failure
Err	Type of failure and description. For more information see chapter 5.4
Time	Time (hrs and minutes) at which the failure occurred
Date	Date at which the failure occurred

Menu: Alarms. Pg. 1 of 1			
Unit	Err.	Time	Date

Figure 5-9

5.1.8 Service menù

This menu is normally used during the maintenance operations. When this screen is visualized, the Control Unit checks the status of the modules of the unit more frequently in order to have a visualization of the different parameters as fast as possible. When this menu is entered, all the secondary functions are interrupted, therefore a possible alarm may not be visualized and registered immediately; when exiting this menu all the alarms which were temporarily put in “stand-by” are registered. If the user sets some modules in OFF modality, these will be automatically reactivated when exiting the menu. This menu is deactivated after 60 minutes if no key is selected. (Figure 5-10).

Menu Line	Description
Fwd	Forward power globally emitted by the amplifier
Unb	Unbalancing power dissipated in the dummy load connected to the combiner
RF Unit1 - On	Fields used to switch ON and OFF the amplifier modules.
Fwd	Forward power generated by the RF module
Rfl	Reflect power from the RF module

Figure 5-10

5.1.9 Settings menù

This menu is used for the settings of the unit. It is therefore the menu which is used more often apart from the possible maintenance operations.(Figure 5-11).

Menu Line	Description
Nominal Pwr	Setting of the level of nominal power, expressed as a percentage of the maximum power level. This is the level that the TX20000U-KLC must reach when the Power Nominal button is pressed, except in case of dysfunction
Low Power	Setting of the reduced power level, expressed as a percentage of the maximum power level. This is the level that the TX20000U-KLC must reach when the Power Lower button is pressed, except in case of dysfunction.
PWG1	Level (Limit) at which the “Power Good” PWG1 is launched. This level is expressed as a percentage of the full-scale to which PWG1 is connected, indicated in the column Assign
PWG2	See PWG1
PWG3	See PWG1
PWG4	See PWG1
Exc' wait time	Delay before assuming the on air exciter is faulty
Talk Address	Address of the unit in the RS485 network
Time	Visualization and setting of the internal clock of the unit
Date	Visualization and setting of the internal calendar of the unit
L.P. Timer	Setting of the automatic power reduction feature: this can be “Auto” (enabled) or “Manual” (disabled). The feature consists in reducing the power to the low power level and then returning to the nominal power at fixed times. The start and stop times are set in this menu selecting “Auto”.
Write Config	Button for the registration of the configurations in each module of the unit.

Figure 5-11

5.1.10 Exciters menù

This menu is used to configure the settings of the exciters (Figure 5-12).

Menu Line	Description
Main Exc	Output power of the exciter currently on air
Stdby Exc	Output power of the exciter currently on the internal dummy load
Main Exciter	Visualization of the “on air” exciter. When positioning the cursor on this line, with the arrow buttons and by pressing Enter, it is possible to operate the switching between the on air exciter and the exciter on dummy load.
Exct.1	Status of the exciter 1. By positioning the cursor on this line with the arrow buttons and by pressing Enter it is possible to switch on and off the exciter.
Exct.2	Same as Exct.1 for the second exciter

Figure 5-12

Nota: the exchange of the eccitatori and the relative cursor are available only if the logic of exchange is set to manual and the yellow LED is lit.

5.1.11 Info menù

This screen informs the user about the configuration of the transmitter. (Figure 5-13).

Menu Line	Description
S.N.	Serial number of the transmitter
Talk Addr.	Address of the RS485 port of the transmitter, it must be obligatorily 3
Baud Rate	Baud rate of the serial port
Software V.	Software version installed in the CCU
Exciter	Number of the exciters in the transmitter: this can be "Single" or "Dual"
Cfg. N+1	Configuration of the transmitter as a N+1 system
External	Checking of the external Fwd, Rfl, Unbal values (Enabled or Disabled)
Reset Safety	Reboot the machine after the intervention of the SAFETY alarm. It must always be "Auto"

Figure 5-13

5.1.12 Release menù

This menu shows the address, the kind of configuration, the software version and the hardware version of all the microprocessor boards of the transmitter. (Figure 5-14).

Menu Line	Description
Control unit	Information on the CCU
Cooling	Information on the pumps board
RF Combiner	Information of the RF combiner
RF Unit 1	Information on module 1
RF Unit 2	Information on module 2
RF Unit 3	Information on module 3
RF Unit 4	Information on module 4

Figure 5-14

5.1.13 Modem menù

This screen informs the user about the configuration of the optional telemetry GSM (Figure 5-14). The parameters on this screen can be displayed only if the selector switch on the CCU is located at a REMOTE location, if it is placed in the LOCAL screen appears as in Figure 5-15

Menu Line	Description
I.D.	Identification of the address of the transmitter, usually 1. In the case of multiple transmitters in N +1 configuration will be given numbers in ascending order, one for each transmitter
Name	Mnemonic name of the station, like place or frequency
S.C.N	Service center number of your mobile operator
Info	Name of service provider
Dial	Normally, ATDT
Phone	Phone numbers that will receive the alert messages
Level	GSM signal level
Status	State Modem
Retry	Number of messages to send. We suggest to set this value to at least 2, in case of problems with the SMS Service Centre.
Type	Modem type, usually GSM

Figure 5-14

Figure 5-15

5.2 Buttons, selector switches and LEDs

The typical machine-control operations are performed using the buttons of the control unit's panel. Specific LEDs correspond to each button and selector switch for indicating the machine's status.(Figure 5-16).

Figure 5-16

The functions performed by the controls are as follows:

Funzione	Descrizione
OFF	Button for turning off the machine. A LED signals that the machine is OFF. In this status, the exciters and the pumps,are off.
STDBY	Button for setting the machine in standby. In this status the transmitter does not emit any power, but is ready to start the transmission: RF modules will be placed in "On" and "Wait: Inhibit" (if the sleep-mode, still able to automatically switch to "Off"), in the case of automatic mode exciters are lit but blocked by interlock. The stand-by is used to test the exciters, in fact in manual modality the operator could arrange them in base to the own requirements; coming from an "On" in manual modality, the system does not touch the interlock. Stand-by status is signalled from a LED. In manual and in stand-by the inhibit of the device doesn't intervene on the interlock of the exciters. This could necessary when the apparatus is in configuration n+1 for verify if the exciters are operational.
ON	Button for turning on the transmitter. The RF modules are placed in a position of On, the pump turns on and the command must be set EXCITER CHANGEOVER automatic.The RF power supply is activated. If the command is set to MANUAL CHANGEOVER EXCITER (led on), exciters will block interlock and have to go through in "exciters menu" of CCU to enable them manually.The exciters should deliver a power of at least 15 W to start the transmitter.

	The power delivered by the RF modules will remain stuck at about 800-900 W for about 10 sec., After which it will begin the regular ramp up and reach the set power.
LOC/REM	Selector switch for setting the transmitter in remote or local mode. In local mode the buttons and the controls via the menus are active. In remote mode the buttons and the controls via the menus are inhibited and the commands may be given only remotely via the parallel interface or via the remote control software.
ALARM RESET	Button to reset the alarm type FAULT or WARNING.
POWER LOWER	Click this button to set the transmitter for supplying the nominal power level. A specific LED signals this setting. The value that corresponds to the nominal level is set by the operator using the menu settings (see 5.1.9)
NOMINAL POWER	Click this button to set the transmitter for supplying the reduced power level. A specific LED signals this setting. The value that corresponds to the reduced level is set by the operator using the menus. (see 5.1.9)
EXCITER CHANGEOVER	Use this button to set the changeover system in manual or automatic mode. The signaling LED turns on when the manual mode is selected. On performing a changeover, the exciter connected to the amplifier is deviated toward the internal dummy load and vice-versa. The operator must use the exciter menu to perform the changeover in manual mode.
LED WARNING	This LED indicates an attention condition (something is not working properly, but the amplifier is still running)
LED FAULT	This LED indicates a fault (the amplifier is blocked, and required the intervention of an operator for the restoration)
LED WAIT	This LED indicates the status of waiting (the amplifier is temporarily disabled, but will be reactivated automatically when the blockage is removed, or after a set period of time depending on the type of protection)
LED INT.LCK	This LED indicates an external inhibition. This check is run on the parallel interface (JP4/4)
LED TX-BUS INT	These LEDs indicate the activity of the serial bus 485 through which the CCU acquires the status every second of the modules
LED RS-232 TX-BUS EXT	These LEDs indicate the communication between the CCU and a PC connected to the RS-232

5.3 Phase ADJ

It 'a resonant circuit "LC" with capacitors on the back of the front panel (Figure 5-17).

Figure 5-17

It 'a resonant circuit "LC" with capacitors on the back of the front panel (Figure 5-17).

The purpose of this circuit is to reduce the power on the dummy load connected to the dialer, varying the phase of input signal to each RF module 5 Kw.

The calibration of this circuit is done during testing, but the working conditions by connecting the transmitter to the antenna may require a revision, in which case proceed as described. The section that interests us is the PHASE ADJ 1 A1 and regulations with regard to the first RF module, A2 for the second, A3 for the third and A4 for the fourth.

Turn off modules n° 3 and 4, using the breakers located to their left, and make adjustments on Modules 1 and 2

1) Insert the screwdriver into the 1 st hole, and rotate 180 degrees clockwise (Pull out the screwdriver) and check the value of the power "Unbalanced" in the service menu (note: the contact of the screwdriver with the circuit "LC" to bring information out of the norm , so the readings must be examined in private screwdriver excerpt)

2) If you obtained a decrease in the value of unbalanced power, go to the second capacitor at the 2 nd hole and also rotate 180 degrees clockwise (go to step 3).

2a) If you obtained a increased rather than decreased power unbalanced to rotate the cap (1° hole) counter-clockwise 360 degrees (180 ° to return it to its starting position to + 180 ° to correct the phase) go to second capacitor at the 2 ° hole and also rotate 180 ° in a counter-clockwise (go to step 3).

3) If the steps set out in paragraph 1 and 2 are not yet sufficient to pass the capacitors of the second RF module (3 rd and 4 th hole), but this time the rotations of the capacitors will be in the opposite direction those made for the holes 1 and 2.

Caution: the second pair of capacitors (3 and 4) must move in the opposite direction to the first.

Example of rotation

Turn off modules n° 1 and 2, using the breakers located to their left, and make adjustments on Modules 3 and 4.

1) Insert the screwdriver into the 5 st hole, and rotate 180 degrees clockwise (Pull out the screwdriver) and check the value of the power “Unbalanced” in the service menu (note: the contact of the screwdriver with the circuit “LC” to bring information out of the norm , so the readings must be examined in private screwdriver excerpt)

2) If you obtained a decrease in the value of unbalanced power, go to the second capacitor at the 6 nd hole and also rotate 180 degrees clockwise (go to step 3).

2a) If you obtained a increased rather than decreased power unbalanced to rotate the cap (5° hole) counter-clockwise 360 degrees (180 ° to return it to its starting position to + 180 ° to correct the phase) go to second capacitor at the 6 ° hole and also rotate 180 ° in a counter-clockwise (go to step 3).

3) If the steps set out in paragraph 1 and 2 are not yet sufficient to pass the capacitors of the second RF module (7° and 8° hole), but this time the rotations of the capacitors will be in the opposite direction those made for the holes 5 and 6.

Caution: the second pair of capacitors (5 and 6) must move in the opposite direction to the first.

Then turn on all the modules and put in phase the whole system.

The procedure remains the same as described above but this time the capacitors are moving four at a time.

Example of rotation

5.4 Alarms

The menu Alarms of the control unit reports all the events connected to possible malfunctioning of the equipment or due to external causes.

Each registration contains the reference to the concerned module, the kind of event and its date and hour.

The module that detected the event is indicated by one of the following acronyms:

- C.U. (Control Unit)
- P.C. (Pump Control)
- R.F. x (RF module number x [from 1 to 4])
- Combi (Combiner/Splitter)

The type of event allows to identify the origin and the consequence of the fault. The first letter of the type of event can be one of the following:

- W "Wait" event that causes the temporary block of the piece of equipment that will be removed as soon as the problem is solved.
- R "Retry", event that causes a temporary block of the piece of equipment, that will effect a restart attempt after a fixed lapse of time. (Max. 8 attempts)
- F "Fault", event that causes the block of the equipment and requires the intervention of an operator for the restart.
- E "Error", event that doesn't cause the interruption of the supply of power, but can reduce the functions of the equipment (e.g cannot be done the changeover function of the exciters)

The possible event types are listed in the table below.

Code	Meaning
Control Unit	
-E.Intl	external interlock
-A.Intl	ausiliary interlock
-Audio-1	audio alarm of exciter 1 is active
-Audio-2	audio alarm of exciter 2 is active
-L.P.Tmr.	Low power timer active
-Ris-2	reserve 2 input is active
-Ris-3	reserve 3 input is active
-Ris-4	reserve 4 input is active
-Mute Flt	"Mute fault": the mute commands (i.e. the interlock commands for the exciters) are not working, they are not connected or the connection is wrong
-Xchg Exc	a changeover of the exciters has been performed
-Cfg. N+1	The machine is in Fault status because three changeover attempts havebeen performed (N+1 configuration)
Pump Control	
-Air Tmp	air temperature alarm
-Lvl.Min.	minimum coolant level alarm
-Lvl.Low	Low coolant level alarm
-Flux	flow alarm not present
-O.Tmp.L.	thermostat radiator fan 1 ^ level (not displayed)
-O.Tmp.H.	thermostat radiator fan 2 ^ level (not displayed)

-Mains	the phase sequence is not correct
-Press.	coolant pressure alarm circuit too high
Combiner	
-Kdj-1/10	thermostat intervened resistance unbalance
-Kdj Maxi	thermostat external resistors imbalance intervened (TX20000U-KLC)
-Fwd	forward power above its limit
-Rfl	reflected power above its limit
-O.dvr In	overdrive (main exciter)
-O.dvr Ld	Too much power dissipated on the internal dummy load (stand by exciter)
-S.W.R.	SWR above its limit
-Ext.Alr.	external alarm for future use
-Pwr.Kdjx	high power kdj
-Pwr.Kdjm	high power kdj max (load present in the TX20000U-KLC)
R.F. Unit	
-Fwd	forward power alarm module
-Rfl	reflected power alarm module
-In	alarm input power module
-Tmp.	high temperature alarm
-Drv. I	driver current above its limit
-Mos 1 I	high current alarm mos1
-Mos 2 I	high current alarm mos2
-Mos 3 I	high current alarm mos3
-Mos 4 I	high current alarm mos4
-Mos 5 I	high current alarm mos5
-Mos 6 I	high current alarm mos6
-Mos 7 I	high current alarm mos7
-Mos 8 I	high current alarm mos8
-Eff.	efficiency too low
-Fuse	module's fuse broken
-O.Tmp.	overheating on the module's heatsink
General	
-Derating	equipment into derating
-Replay err.	wrong answer by the module interrogated
-Safety	emergency button pressed
Time-out	the module does not respond
Default Talk Address: 31	default address for configuration
Device not configured	control unit is not configured
Waiting for Retry: xxxx sec.	to reset the pause time, press ok
Start Up in Progress	starting up
Please Wait	please wait.....

5.5 Timing timer CCU

CPU control pumps

Evaluation time pump 120 sec.

It 'time within which to reach the ok from the box pumps (pressure) for stop the exchange sequence.

Time out signal box pressure pumps. 10 sec.

It 'time in a row that the signal of the box must remain pumps failed to activate a request to exchange pumps.

Programmed exchange pumps Time 10 days

It 'time for a smooth and uninterrupted takes place after which a programmed exchange pumps.

Time out after ventilation 5 min.

It 'time for the pumps and fans continue to work after an off the machine.

Auto self pump 24 hrs.

Is the time that the pump is turned on by default, to equipment into off.

Note: the pumps are alternated every 24 hours.

CPU RF combiner

Timer output unbalanced 1 min.

Is the time it is expected before sending a request for power reduction (derating) after passing to the lower level of the unbalanced power.

Timer output high limit unbalanced. 10 sec.

Is the time it takes to wait before the system goes into protection for excess power unbalanced (high limit exceeded).

CCU

Time out display 15 min.

Is the time after which the display returns to the default menu.

Time out display service 60 min.

Is the time from the service menu, the display returns to the default menu.

Time out on power-up evaluation exciters 120 sec.

Is the time that from the start in power off the exciter is programmed to become active.

Time-out evaluation exciters 25 sec.

It is the maximum time of exchange within which the programmed exciter must become active.

Derating time 30 min.

Is the time that the unit remains in power derating after passing to the lower level of the unbalanced power.

5.6 Rear panel

1	IIme connector for power relay board (24 Vac)
2	VDE power PTX-2 and the fuse (10A)
3	VDE power PTX-1 and the fuse (10A)
4	Connectors various control and acquisition (see cap. 6.4)
5	BNC for RF testing
6	VDE power CCU and the fuse (4A)
7	RF output module 2
8	Connector inhibition functions (see cap. 6.3.1)
9	RF output module 1
10	Sensor input signals
11	Input RF exciter 2
12	Input RF exciter 1
13	Input signals liquid levels

6. Wiring diagrams CCU

6.2.1 Settings

Leaving the jumpers as shown in the figure, the audio alarm is active, that is, when the audio is no longer present at the exciter, at the time of on air, the system automatically switches on the other exciter. Removing the jumpers the audio alarm is disabled. We must also disable the control “ExPwr” on the related modulator, to do this must be removed from the connector JP8 of panel card (located in the front of the PTX-LCD), the “Jump 4” if the modulator mounts the CPU 8-bit, instead you have to remove the “Jump 5” if the modulator is equipped with the 16-bit CPU.

Panel card

Meaning Jump JP8 with 8-bit CPU

JP8 Position of panel card jumpers.

The software denotes jumper positions as follows (1 signifies a closed jumper, 0 open jumper, X any position):

Jump 4	Jump 5	Jump 6	Jump 7	Jump 8	Meaning
0	0	X	X	X	ExPwr, ExSts and ExFrq menu disabled
1	0	X	X	X	ExPwr and ExSts menu enabled, ExFrq menu disabled
0	1	X	X	X	ExPwr and ExSts menu disabled, ExFrq enabled
1	1	X	X	X	ExPwr, ExSts and ExFrq disabled
X	X	0	0	0	Default parameters set in case of exciter reset: CCIR for PLL at 10MHz
X	X	1	0	0	Default parameters set in case of exciter reset: FCC
X	X	0	1	0	Default parameters set in case of exciter reset: OIRT
X	X	1	1	0	Default parameters set in case of exciter reset: Japan
X	X	0	0	1	Default parameters set in case of exciter reset: Italy
X	X	1	0	1	Default parameters set in case of exciter reset: CSI
X	X	0	1	1	Default parameters set in case of exciter reset: China
X	X	1	1	1	Reserved for future applications

Meaning Jump JP8 with 16-bit CPU

JP8 Position of panel card jumpers.

The software denotes jumper positions as follows (1 signifies a closed jumper, 0 open jumper, X any position):

Jump 5	Jump 6	Jump 7	Jump 8	Jump 9	Jump 10	Jump 11	Jump 12	Jump 13	Jump 14	Meaning
0	0	X	X	X	X	X	X	X	X	ExPwr, ExSts and ExFrq menu disabled
1	0	X	X	X	X	X	X	X	X	ExPwr and ExSts menu enabled, ExFrq menu disabled
0	1	X	X	X	X	X	X	X	X	ExPwr and ExSts menu disabled, ExFrq enabled
1	1	X	X	X	X	X	X	X	X	ExPwr, ExSts and ExFrq disabled
X	X	0	0	0	X	X	X	X	X	Default parameters set in case of exciter reset: CCIR for PLL at 10MHz
X	X	1	0	0	X	X	X	X	X	Default parameters set in case of exciter reset: FCC
X	X	0	1	0	X	X	X	X	X	Default parameters set in case of exciter reset: OIRT
X	X	1	1	0	X	X	X	X	X	Default parameters set in case of exciter reset: Japan
X	X	0	0	1	X	X	X	X	X	Default parameters set in case of exciter reset: Italia
X	X	1	0	1	X	X	X	X	X	Default parameters set in case of exciter reset: CSI
X	X	0	1	1	X	X	X	X	X	Reserved for future applications
X	X	1	1	1	X	X	X	X	X	Reserved for future applications
X	X	X	X	X	1	X	X	X	X	MAINS alarm enabling. NOTE: in this case is necessary to move the two jumpers from positions 3-5 and 4-6 to the positions 1-3 and 2-4, of Supply card JP6 jumper(see fig. below)
X	X	X	X	X	X	1	X	X	X	TRDSP optional card presence
X	X	X	X	X	X	X	1	X	X	13 MHz Quartz frequency on PLL card
X	X	X	X	X	X	X	X	1	X	Telemetry optional card presence
X	X	X	X	X	X	X	X	X	1	SFN software version (only for TRDSP)

Pagina 3

6.3.1 Foldback voltage calibration

The CCU generates a control voltage that works on the modules to obtain output from the transmitter, the power set in the menu settings (Automatic Gain Control - AGC). Only if you change or CCU during the first switch is set to this voltage, to perform this calibration obtain a tester and go on the diode D20 between the cathode and ground and with the RV24 trimmer adjust the voltage to 4.3 volts

Note: The CCU should be in a position OFF

If you wish to disable this check must make a bridge in the back of the CCU on the green terminal, indicated in the figure, between pins 2 and 5

Bridging pins 2 and 5

Note: Pin 1 is always to the right of each green terminal

6.3.2 Calibration reading power

7. PJ5000U-KLC amplifier (alias Barracuda)

7.1 Description

The PJ5000U-KLC is an RF amplifier for frequency modulation sound broadcasting with a max. rated output of 5400W.

It is a fully solid-state apparatus of modern design that use MOSFET as active components in the FM amplifying modules, and for the cooling it uses of the coolant rather than forced air. The amplifier is designed in only 4 units for assembly in a 19" rack., is controlled by a micro-processor-based system.

7.2 Frontal Panel

1	RF TEST	BNC connector for RF monitor output. The output level is -60dB referred to the power output in 87.5 - 108 MHz range
2	ALARM RESET	Button used to manually reset the protection system
3	LOC/REM	Switch to select the local or remote control modes
4	ESC	Button used to exit from a menu
5	DISPLAY	LCD Display
6	ON	Green LED. Indicates that the amplifier is in ON condition
7	WAIT	This LED indicates the status of waiting (the amplifier is temporarily disabled, but will be reactivated automatically when the blockage is removed, or after a set period of time depending on the type of protection)
8	FAULT	This LED indicates a fault (the amplifier is blocked, and required the intervention of an operator for the restoration).Requires pressing the button ALARM RESET
9	LOCAL	Yellow LED, indicating that the amplifier is in local control mode
10	FOLDBACK	Yellow LED, indicating that the foldback function is active (automatic reduction of the distributed power, run by the micro board inside the module)

11		Trimmer to regulate the contrast of the LCD display
12		Click this button to scroll inside a menu (to the right or down) or to reduce the value of a parameter being modified.
13		Click this button to scroll inside a menu (to the left or up) or to increase the value of a parameter being modified.
14	OK	Click this button to access a sub-menu, to enter the editing mode or to confirm a modified value.
15-25	AIR FLOW	Grill for the ventilation flow passage
16	COOLANT STATUS A-B-C	The green LED indicates correct operation of pumps (A e B) and external unit fan (C). These LEDs are active only when the module is single and is configured as "Master" that handles the exchange of the pumps and the fan on the external unit (TX5000U-KLC). For configurations TX10000U-KLC or higher, the module is configured as "slave", is the CCU who runs everything and the LEDs indicate: A - no indication, B - internal fans lit, C - no indication
17	POWER SUPPLY 1-2-3	When the LED is yellow indicates the presence of an anomaly in one or more in power supply, the module continues to operate but the power is reduced. When the LED is red indicates that its power supply is broken, the module continues to operate but the power is reduced.
18	FAULT	This red LED indicates a fault (the amplifier is blocked, and required the intervention of an operator for the restoration)
19	FUSES	Yellow LED that indicates the presence of one or more blown fuses on the board fuses, see cap. 8.17
20	FOLDBACK	Yellow LED, indicating that the foldback function is active (automatic reduction of the distributed power, run by the CPU inside the module).
21	RF PWR ADJ	Trimmer adjustment of the output power of a single module, this control operates by varying the VPA pallet mosfet
22	WARNING	Yellow LED, indicates that the coolant level in the tank the external unit has reached the minimum level (only active for transmitter TX5000U-KLC)
23	LOW	Red LED indicates that the tank of the external unit is empty, and requires the immediate stopping of the machine (only active for transmitter TX5000U-KLC)
24	FLOW	Red LED indicates a malfunction due to the absence of coolant flow (only active for transmitter TX5000U-KLC)

7.3 Rear panel

1	PUMPS INTERFACE	DB15 connector for the management of the pump control board (only used in the transmitter TX5000U-KLC)
2	I2C BUS	DB9 connector for I2C bus networking
3	RS232	DB9 connector to interface with external devices or factory programming
4	TELEMETRY	DB25 telemetry connector
5	COMMON BUS	DB15 connector for interfacement with other equipment, for example, the CCU
6	MAINS CONNECTOR	Plug for mains power supply
7	MAINS FUSE	Protection fuses of the power supplies 1,2 and 3
8	OUTPUT COOLANT	Hydraulic connector for the output of liquid cooling (1/2 ")
9	AIR FLOW	Grill for the ventilation flow passage
10	INPUT COOLANT	Hydraulic connector for the input of liquid cooling (1/2 ")
11	RF IN	RF input connector ("N" type)
12	FUSE	Protection fuse for the service section
13	INTERLOCK	BNC connectors to inhibit an external device, as an exciter. In case of fault, the inner connector is shorted to ground
14	RF OUT	RF output connector (7/8" EIA flange)

7.4 Software

This chapter describes the ways in which the microprocessor controls the amplifier and how the user may interact with the software.

The figure in the follow shows the overall software user interface diagram.

Note: the user may issue commands to the equipment only when in LOCAL mode by means of the selector. Otherwise the user may only read the parameters and not change them.

When turned on, the LCD shows the introductory screenful with the equipment's software and hardware versions.

```
PJ5000U-KLC
SW 2.01 HW 1.01
```

A few seconds later the main screenful is displayed indicating the forward and reflected power values. The following figure shows the complete aspect of this screen, as will the next (visible on the display are only two rows at a time, use the UP 'and DOWN' to display all information):

```
Fwd Pwr 4.94 kW
Rfl Pwr 1.4 W
InP Pwr 85 W
SWR Off
```

Press the ESC key to view the selection screenful from which to access all the menus:

Fnc Pwr P.A Set
Alm Mix Urs

To access one of the submenus select its name (which is underlined by a blinking cursor) using the RIGHT or LEFT keys and then press the ENTER key.

Take note that certain parameters, which are measured and shown to the user, might not be available in a few cases. This occurs when, for physical reasons, the measured values are not significant for control software internal use.

When the value of a parameter is not available for the aforesaid reason, symbol “===” appears on the display in lieu of the value.

7.4.1 Operating Menu (Fnc)

On
Off

Turn the power amplifier ON or OFF via this menu..

When the amplifier is turned OFF, the internal conductor of the INTERLOCK connector is set to ground so as to force the connected exciter to a stand-by condition (this takes place only if the exciter features the interlock option, like those produced by RVR, and if the associated connector is connected to the amplifier).

When the amplifier is turned OFF the software program waits 5 minutes for the machine to cool down and then the fans and pumps turn OFF.

7.4.2 Power Menu (Pwr)

This screen, made up of several lines that may be scrolled through using the UP and DOWN keys, displays all the measurements associated with the behaviour of the amplifier's power section:

- Forward Power (Fwd Pwr)
- Reflected Power (Rfl Pwr)
- Input Power (Inp Pwr)
- SWR (Standing Wave Ratio)

Fwd Pwr	4.94	kW
Rfl Pwr	1.4	W
InP Pwr	85	W
SWR	Off	

7.4.3 Power Amplifier Menu (P.A.)

This screen, consisting of several lines that may be scrolled through by using the UP and DOWN keys, displays all the measurements associated with the RF amplifier of the equipment:

- Voltage (VPA)
- Current (IPA)
- Temperature
- Power Supply Voltage (Mains-percentage variation as compared to the nominal voltage)
- Efficiency

VPA	49.8	V
IPA	55.3	A
Temp.	38.3	°C
Mains	+1	%
Eff.	68.3	%

7.4.4 Warning threshold setting menu (Set)

As mentioned in the introduction the amplifier offers three settable warning thresholds. Each one is compared with the level of one of the machine's operating parameters. The results of the comparison are available on the telemetry connector, on the contacts of the optional external telemetry card and may be read on the display as "O" (open, i.e. false result) or "C" (closed, i.e. real result).

The three settable thresholds (Power Good) refer to the emitted power level. The thresholds are expressed in terms of percentage of full scale of greatness considered.

The limit voltages of the quantities monitored by the warning thresholds for are the follows:

- Forward Power 5000 W
- Forward Power 300 W

Proceed as follows to change the values of the warning thresholds:

- Select the line to be changed (with the UP and DOWN keys)
- Press the ENTER key
- Change the threshold value (UP and DOWN keys)
- Press ENTER to confirm

The figure below shows a configuration example of this menu.

Set	Lmt	St
PwrGd1	> 80 %	C
PwrGd2	> 50 %	0
PwrGd3	> 50 %	0

In this example the alarm thresholds are as follows:

- PwrGd1 4000 W (80% x 5000 W)
- PwrGd2 2500 W (50% x 5000 W)
- PwrGd3 150 W (50% x 300 W)

7.4.5 Alarm Menu (Alm)

This menu provides information about the status of the amplifier's built-in protection system.

It consists of a certain number of lines each of which contains the name of the variable controlled by the protection system and the type of intervention carried out by the system.

Said intervention may be as follows: X - (Y), Wait, or Dis. (Disabled).

The aspect of this menu is as follows:

```

Fwd Pwr  0-(8)
Rfl Pwr  0-(8)
InP Pwr  0-(8)
U.P.A.    Dis.
I.P.A.    0-(8)
Mains     Wait
SWR       Dis.
Eff.      Dis.
Inhibit   Off
R.F. Alarm Off
H2O Press. Off
  
```

The task of this menu is essentially to help the technician in identifying the possible causes of any malfunction.

7.4.6 Miscellaneous Menu (Mix)

In this menu the user may:

- set the address in the serial bus connection, type I2C
- set the main menu display mode
- exchange the operation pump

```
Item:
IIC Addr:  1
Display : Dig.
Pump:      <2>
```

The network address I2C is very important when the amplifier is connected in an RVR transmission system that envisages the use of this protocol. Do not change it for any reason whatsoever.

The main menu may be displayed either in Digital mode (this is the standard mode) or Analog mode:

```
Rf1 Pwr  1.4 ▴
■■
```

In the analog display mode the bar at the bottom shows the instant reflected power level, while the small triangle indicates the 100% of full scale of the bar.

This type of display might be useful when a device to be tuned is connected to the amplifier's output such as a cavity.

WARNING: this procedure for the exchange both manual and automatic pumps occurs only if the module is configured as “master” and is single (TX5000U-KLC). From the transmitter TX10000U-KLC forward all this is handled only by the CCU.

The pump is exchanged automatically every time you switch off and subsequently re-switch on the equipment. In case you never switch off the equipment, the pump is exchanged automatically every 10 days of normal operation.

The operation of pumps exchange is necessary for the regular functioning of the same.

In case of a fault on pump pressure, and then an interruption of the cooling flow, after 10 seconds is recorded by the machine which starts the operations of exchange pumps.

Note: the delay of 10 seconds is necessary to prevent the record of false positives as a momentary pressure drop due to air bubbles in the cooling system.

The machine will continue to exchange the pumps every two minutes, until the situation that caused the alarm is resolved.

After six minutes the equipment goes in a WAIT condition, and will be reported through the red YELLOW on the front, in the meanwhile the machine will continue to exchange pumps every 2 minutes in order to resolve the alarm condition.

Note: Please resolve as soon as possible the condition that brought the equipment to the alarm, this to restore the correct operation. Check the LEDs indicators on the front panel, or check the ALARM menu, to see which alarm condition has brought to the halt of the machine.

In the event that only one of two pumps work correctly, and then exchange pumps can not be done, will be reported into display PUMP FAILED after 3 minutes of the failed attempt.

Note: Please resolve as soon as possible replacing the faulty pump.

7.4.7 Version Menu (Vrs)

This screenful shows the software version and the hardware version of the equipment.

A screenshot of a monochrome LCD display showing the Version Menu. The text is arranged in four lines: 'Software Ver.', 'LCFPA-000101', '03.03 25-11-09', and 'Hardware Ver. 03.12'.

```
Software Ver.  
LCFPA-000101  
03.03 25-11-09  
Hardware Ver.  
03.12
```

7.5 Connector Description

7.5.1 Telemetry

Type: DB25 female

1	Internal SWR	Disable
2	Tensione dell' amplificatore di potenza RF	3,9V x 50V

8.5.1 Prot-F foldback calibration

The procedure applies to all equipment that use the PROT F card.

Calibration TR10:

connect the multimeter to pin 3 of U3 (LM324) and measuring a voltage of 3,9V +/- 0,2V.

Calibration TR9:

connect the multimeter on test point TP1, and measure a voltage of 0V with tolerance -0V +0,2V

CAUTION:

Follow exactly the sequence of calibration trimmer, TR10 first and then TR9.

This is a detailed technical layout of a power supply PCB. The components are distributed across the board as follows:

- Top Left:** Capacitors C5 (1uF X2 275VAC) and C6 (1uF X2 275VAC). Transformer TF1 (2X1.8mH). Mounting points FIX2, FIX3, and FIX4.
- Bottom Left:** Capacitor C7 (MKP2.2uF/400). Diode D4 (GBPC3508W HIGH POWER). Mounting points FIX1 and FIX6. A label "Top" is near the bottom left corner.
- Center:** IC D1 (20ETS08) with pins CS1, CS2, PE-51718, and 1. Resistors R6047ENZ1. Inductors L1 and L2 (130uH). Transformer T1 (CSPFC4280PWRR0). NTC 10K. J2. MD2. MODULO IN. MD1. Mounting points FIX5 and FIX7.
- Top Right:** Capacitor C11 (470uF-400). Diode D2 (CSD20060D). Resistor R4 (33R-2W). Mounting point FIX8.
- Bottom Right:** Capacitor C9 (470uF-400). Diode D3 (SCS220AE2). Resistor R5 (33R-2W). Mounting points FIX9 and FIX10.
- Far Right:** Capacitors C10 and C16 (470uF-400). Varistor RV3 (385Vac). FST1 and FST2. Mounting points FIX16 and FIX17.

80	1	U8	PIC18F452T	TQFP44 SMD Microprocessor
81	11	VAR1,VAR2,VAR3,VAR4,VAR5, VAR6,VAR7,VAR8,VAR9, VAR10,VAR11	V18MLE0805	ESD SMD protector
82	1	X1	4MHz	Quarzo SMD HC49SMD

8.11.1 Board settings

Set the switches as follows:

SW	ON	OFF
1		X
2	X	
3		X
4		X

By making a bridge with a cable between TP6 and GROUND is inhibited the operation of this board

Make the following jumpers with a drop of tin:
R104-J4
R101-J1

Make the following jumper with a drop of tin:
R107-J7

8.12 LED board (SL154LD1001)

Scheda led Revised: 04/12/2008

4	2	C32,C35	100p 50V	(CCP5):Condesatore Ceramico passo 5.08	CKM101KC600C
5	2	C46,C42	1000uF 35V	(CEV_D13,2P5,08):Cond. Elet. Vert. diam. 13.2mm passo 5.08	CEA108MC350V
6	3	C43,C47,C131	10uF 35V	(CES5X5,5):Cond. Elet. All. SMD diametro 5 altezza 5,5	CES106B350
7	5	C44,C45,C48,C49,C50	100uF 35V	(CES6,3X8):Cond. Elet. All. SMD diametro 6,5 altezza 8	CES107E250
8	1	C119	2,2uF 35V	Cond. Elet. All. SMD diametro 4 altezza 5,5	CES225A500
9	58	C51,C58,C59,C60,C62,C69, C71,C77,C78,C82,C83,C87, C88,C89,C90,C97,C99,C105, C106,C110,C114,C117,C118, C120,C121,C124,C125,C126, C128,C129,C130,C132,C136, C137,C139,C140,C141,C143, C144,C145,C147,C148,C149, C150,C151,C152,C153,C154, C155,C156,C157,C158,C159, C160,C161,C162,C163,C164	100n	(0805/0603):Componente SMD size 0805 o 0603	CCC085104KXC
10	11	C53,C64,C74,C80,C85,C92, C102,C108,C111,C122,C123	100p	(0805/0603):Componente SMD size 0805 o 0603	CCC085101JCC
11	16	C54,C55,C56,C67,C75,C81, C86,C95,C103,C109,C133, C134,C135,C138,C142,C146	1n	(0805/0603):Componente SMD size 0805 o 0603	CCC085102JNC
12	2	C94,C66	680p HQ	(CSMD HQ):Chip HQ 680p	CHQ681JA101
13	1	C113	1uF 100V	(CEV_D6,6P2,54):Cond. Elet. Vert. diam. 6.5mm passo 2.54	CEA105MA500V
14	1	C127	1uF 25V	(CES4X5,5):Cond. Elet. All. SMD diametro 4 altezza 5,5	CES105A500
15	3	DZ1,D22,DZ3	5V1_SMD	(MINIMELF):Zener SMD 5V1	DIZ5V1MINI
16	1	D1	WL04	(WL04):Ponte diodi rettificatore circolare	PNRWL02
17	2	D3,D2	5V1 1W	(ZENER 1W):Diodo Zener 5V1 1W (come diodi rettificatori da 1A)	DIZ5V11W
18	11	D4,D5,D6,D16,D19,D25,D26, D27,D28,D29,D30	BAV99	(SOT-23):Diodo SMD SOT-23	DISBAV99
19	16	D7,D8,D9,D10,D11,D12,D13, D14,D15,D17,D18,D20,D21, D22,D23,D24	HSMS2800	(SOT-23):Diodo SMD SOT-23	DISHSMS2800
20	11	FIX1,FIX2,FIX3,FIX4,FIX5, FIX6,FIX7,FIX8,FIX9, FIX10,FIX11	FIX35	(FIX35):Non è un componente	
21	1	F1	2A	(FHOLDER_C):Portafusibile a Clip per Fuse 5x20 2A da c.s.	PFSS5X20CS+FUS5X20RP2+COPPFSS5X20CS
22	2	F3,F2	DSS310	(DSS310):Filtro MURATA mod. DSS310	FILTRO ANTIDIST.EMI MURATA 22NF 50V
23	1	IS1	4N25	(DIP6_L):Opto su zoccolo 8pins	LED4N26
24	1	JP1	STRIP 10x10	(STRIP10X2):Strip 10+10 poli passo 2.54 Femmina	CNTSTF10DDB
25	1	JP2	STRIP 13x13	(STRIP13X2):Strip 13+13 poli passo 2.54 Femmina	CNTSTF13DDB
26	1	JP3	LUMBERG 6PV	(LUMBERG 6PV):Connettore tipo Lumberg 6 poli verticale	CNT25MSF6
27	1	JP4	CN16_FLAT	(FLAT16V):Conn. per Flat Cable 16pp Vert	CNTMCS16A
28	1	JP5	CN40_FLAT	(FLAT40V):Conn. per Flat Cable 40pp Vert	CNTMCS40A
29	1	JP6	CN10_FLAT	(FLAT10V):Conn. per Flat Cable 10pp Vert	CNTMCS10A
30	4	PD1,PD2,PD11,PD12	PAD1A	(PAD1A):Non è un componente	
31	8	PD3,PD4,PD5,PD6,PD7,PD8, PD9,PD10	PAD10A	(PAD10A):Non è un componente	
32	1	Q1	BC847	(SOT-23):Transistor SMD	TRNBC847
33	1	Q2	BC857	(SOT-23):Transistor SMD	TRNBC857
34	36	R1,R2,R3,R4,R6,R7,R8,R9, R18,R30,R39,R53,R62, R71,R80,R89,R94,R96,R97, R98,R116,R119,R130,R132, R136,R150,R154,R156,R164, R166,R174,R176,R182,R183, R186,R187	1k00	(0805/0603):Componente SMD 1% size 0805 o 0603	RCH085F0001K
35	24	R5,R20,R21,R31,R32,R40, R41,R54,R55,R63,R64,R72, R73,R81,R82,R90,R91,R100, R106,R126,R147,R155, R175,R185	100R0	(0805/0603):Componente SMD 1% size 0805 o 0603	RCH085F0100H
36	2	R11,R10	10 1/2W	(R1/2W):Resistenza 10 Ohm 1/2W	RSC1/2J0010H
37	2	R12,R13	RXE110	(RXE110):PTC (Fusibile Autoripristinante)	FUSAUTRX110A
38	11	R14,R26,R35,R48,R58,R67, R76,R85,R158,R168,R178	51R0	(0805/0603):Componente SMD 1% size 0805 o 0603	RCH085F0051H
39	57	R15,R16,R17,R23,R27,R28, R29,R36,R37,R38,R49,R50, R51,R59,R60,R61,R68,R69, R70,R77,R78,R79,R86,R87, R88,R95,R105,R108,R109, R111,R112,R115,R120,R121, R122,R123,R125,R127,R134, R135,R137,R138,R140,R141, R142,R145,R149,R153,R160, R162,R163,R169,R170,R173, R180,R165,R25	10k0	(0805/0603):Componente SMD 1% size 0805 o 0603	RCH085F0010K
40	15	R19,R22,R33,R42,R56,R65, R74,R83,R92,R102,R107, R110,R139,R143,R144	100k0	(0805/0603):Componente SMD 1% size 0805 o 0603	RCH085F0100K
41	8	R24,R34,R43,R57,R66,R75, R84,R93	10R0	(0805/0603):Componente SMD 1% size 0805 o 0603	RCH085F0010H
42	4	R44,R45,R46,R47	20k0 1/4W	(R1/4W):Resistenza 20K 1% 1/4W	RSM1/4F0020K
43	1	R52	422R	(0805/0603):Componente SMD 1% size 0805 o 0603	RCH085F0422H

NOTA1

8.20.1 Datasheet of MRF6VP11KH

Freescale Semiconductor Technical Data

RF Power Field Effect Transistors N-Channel Enhancement-Mode Lateral MOSFETs

Designed primarily for pulse wideband applications with frequencies up to 150 MHz. Devices are unmatched and are suitable for use in industrial, medical and scientific applications.

- Typical Pulse Performance at 130 MHz: $V_{DD} = 50$ Volts, $I_{DQ} = 150$ mA, $P_{out} = 1000$ Watts Peak (200 W Avg.), Pulse Width = 100 μ sec, Duty Cycle = 20%
Power Gain — 26 dB
Drain Efficiency — 71%
- Capable of Handling 10:1 VSWR, @ 50 Vdc, 130 MHz, 1000 Watts Peak Power

Features

- Characterized with Series Equivalent Large-Signal Impedance Parameters
- CW Operation Capability with Adequate Cooling
- Qualified Up to a Maximum of 50 V_{DD} Operation
- Integrated ESD Protection
- Designed for Push-Pull Operation
- Greater Negative Gate-Source Voltage Range for Improved Class C Operation
- In Tape and Reel, R6 Suffix = 150 Units, 56 mm Tape Width, 13 inch Reel.
R5 Suffix = 50 Units, 56 mm Tape Width, 13 inch Reel.

Table 3. ESD Protection Characteristics

Test Methodology	Class
Human Body Model (per JESD22-A114)	2, passes 2000 V
Machine Model (per EIA/JESD22-A115)	A, passes 125 V
Charge Device Model (per JESD22-C101)	IV, passes 2000 V

Table 4. Electrical Characteristics ($T_A = 25^\circ\text{C}$ unless otherwise noted)

Characteristic	Symbol	Min	Typ	Max	Unit
Off Characteristics (1)					
Gate-Source Leakage Current ($V_{GS} = 5$ Vdc, $V_{DS} = 0$ Vdc)	I_{GSS}	—	—	10	μ Adc
Drain-Source Breakdown Voltage ($I_D = 300$ mA, $V_{GS} = 0$ Vdc)	$V_{(BR)DSS}$	110	—	—	Vdc
Zero Gate Voltage Drain Leakage Current ($V_{DS} = 50$ Vdc, $V_{GS} = 0$ Vdc)	I_{DSS}	—	—	100	μ Adc
Zero Gate Voltage Drain Leakage Current ($V_{DS} = 100$ Vdc, $V_{GS} = 0$ Vdc)	I_{DSS}	—	—	5	mA

On Characteristics

Gate Threshold Voltage (1) ($V_{DS} = 10$ Vdc, $I_D = 1600$ μ Adc)	$V_{GS(th)}$	1	1.63	3	Vdc
Gate Quiescent Voltage (2) ($V_{DD} = 50$ Vdc, $I_D = 150$ mAdc, Measured in Functional Test)	$V_{GS(Q)}$	1.5	2.2	3.5	Vdc
Drain-Source On-Voltage (1) ($V_{GS} = 10$ Vdc, $I_D = 4$ Adc)	$V_{DS(on)}$	—	0.28	—	Vdc

Dynamic Characteristics (1)

Reverse Transfer Capacitance ($V_{DS} = 50$ Vdc $\pm$ 30 mV(rms)ac @ 1 MHz, $V_{GS} = 0$ Vdc)	C_{rss}	—	3.3	—	pF
Output Capacitance ($V_{DS} = 50$ Vdc $\pm$ 30 mV(rms)ac @ 1 MHz, $V_{GS} = 0$ Vdc)	C_{oss}	—	147	—	pF
Input Capacitance ($V_{DS} = 50$ Vdc, $V_{GS} = 0$ Vdc $\pm$ 30 mV(rms)ac @ 1 MHz)	C_{iss}	—	506	—	pF

Functional Tests (2,3) (In Freescale Test Fixture, 50 ohm system) $V_{DD} = 50$ Vdc, $I_{DQ} = 150$ mA, $P_{out} = 1000$ W Peak (200 W Avg.), $f = 130$ MHz, 100 μ sec Pulse Width, 20% Duty Cycle

Power Gain	G_{ps}	24	26	28	dB
Drain Efficiency	η_D	69	71	—	%
Input Return Loss	IRL	—	-16	-9	dB

- Each side of device measured separately.
- Measurements made with device in push-pull configuration.
- Measurements made with device in straight lead configuration before any lead forming operation is applied. Lead forming is used for gull wing (GS) parts.

Revision	Date	Description
0	Jan. 2008	• Initial Release of Data Sheet
1	Apr. 2008	• Corrected description and part number for the R1 resistor and updated R2 resistor to latest RoHS compliant part number in Table 5, Test Circuit Component Designations and Values, p. 3. • Added Fig. 12, Maximum Transient Thermal Impedance, p. 6
2	July 2008	• Added MTTF CW graph, Fig. 13, MTTF versus Junction Temperature, p. 6
3	Sept. 2008	• Added Note to Fig. 4, Capacitance versus Drain–Source Voltage, to denote that each side of device is measured separately, p. 5 • Updated Fig. 5, DC Safe Operating Area, to clarify that measurement is on a per–side basis, p. 5 • Corrected Fig. 13, MTTF versus Junction Temperature – CW, to reflect the correct die size and increased the MTTF factor accordingly, p. 6 • Corrected Fig. 14, MTTF versus Junction Temperature – Pulsed, to reflect the correct die size and increased the MTTF factor accordingly, p. 6
4	Dec. 2008	• Fig. 15, Series Equivalent Source and Load Impedance, corrected Z _{source} copy to read “Test circuit impedance as measured from gate to gate, balanced configuration” and Z _{load} copy to read “Test circuit impedance as measured from drain to drain, balanced configuration”, p. 7
5	July 2009	• Added 1000 W CW thermal data at 100 MHz to Thermal Characteristics table, p. 1 • Changed “EKME630ELL471MK25S” part number to “MCGPR63V477M13X26–RH”, changed R1 Description from “1 KΩ, 1/4 W Axial Leaded Resistor” to “1 KΩ, 1/4 W Carbon Leaded Resistor” and “CMF601000R0FKEK” part number to “MCCFR0W4J0102A50”, Table 5, Test Circuit Component Designations and Values, p. 3 • Corrected Fig. 13, MTTF versus Junction Temperature – CW, to reflect change in Drain Efficiency from 70% to 72%, p. 6 • Added Electromigration MTTF Calculator and RF High Power Model availability to Product Documentation, Tools and Software, p. 20
6	Dec. 2009	• Device frequency range improved from 10–150 MHz to 1.8–150 MHz, p. 1 • Reporting of pulsed thermal data now shown using the Z _{θJC} symbol, Table 2. Thermal Characteristics, p. 1
7	Apr. 2010	• Operating Junction Temperature increased from 200°C to 225°C in Maximum Ratings table and related “Continuous use at maximum temperature will affect MTTF” footnote added, p. 1
8	Sept. 2012	• Added part number MRF6VP11KGSR5, p. 1 • Added 2282–02 (NI–1230S–4 Gull) package isometric, p. 1, and Mechanical Outline, p. 10, 11 • Table 3, ESD Protection Characteristics: added the device’s ESD passing level as applicable to each ESD class, p. 2 • Modified figure titles and/or graph axes labels to clarify application use, p. 5, 6 • Fig. 12, Transient Thermal Impedance: graph updated to show correct CW operation, p. 6 • Fig. 13, MTTF versus Junction Temperature – CW: MTTF end temperature on graph changed to match maximum operating junction temperature, p. 6 • Fig. 14, MTTF versus Junction Temperature – Pulsed removed, p. 6. Refer to the device’s MTTF Calculator available at freescale.com/RFpower . Select Software & Tools/Development Tools/Calculators to access MTTF calculators by product.

8.20.2 Datasheet of MRFE6VP61K25H

Freescale Semiconductor Technical Data

RF Power LDMOS Transistors High Ruggedness N-Channel Enhancement-Mode Lateral MOSFETs

These high ruggedness devices are designed for use in high VSWR industrial (including laser and plasma exciters), broadcast (analog and digital), aerospace and radio/land mobile applications. They are unmatched input and output designs allowing wide frequency range utilization, between 1.8 and 600 MHz.

- Typical Performance: $V_{DD} = 50$ Volts, $I_{DQ} = 100$ mA

Signal Type	P_{out} (W)	f (MHz)	G_{ps} (dB)	η_D (%)
Pulse (100 μ sec, 20% Duty Cycle)	1250 Peak	230	24.0	74.0
CW	1250 CW	230	22.8	74.8

Application Circuits (1) — Typical Performance

Frequency (MHz)	Signal Type	P_{out} (W)	G_{ps} (dB)	η_D (%)
27	CW	1300	27	81
40	CW	1300	26	85
81.36	CW	1250	27	84
87.5–108	CW	1100	24	80
144–148	CW	1250	26	78
170–230	DVB-T	225	25	30
352	Pulse (200 μ sec, 20% Duty Cycle)	1250	21.5	66
352	CW	1150	20.5	68
500	CW	1000	18	58

1. Contact your local Freescale sales office for additional information on specific circuit designs.

Load Mismatch/Ruggedness

Frequency (MHz)	Signal Type	VSWR	P_{out} (W)	Test Voltage	Result
230	Pulse (100 μ sec, 20% Duty Cycle)	> 65:1 at all Phase Angles	1500 Peak (3 dB Overdrive)	50	No Device Degradation

Features

- Unmatched Input and Output Allowing Wide Frequency Range Utilization
- Device can be used Single-Ended or in a Push-Pull Configuration
- Qualified Up to a Maximum of 50 V_{DD} Operation
- Characterized from 30 V to 50 V for Extended Power Range
- Suitable for Linear Application with Appropriate Biasing
- Integrated ESD Protection with Greater Negative Gate-Source Voltage Range for Improved Class C Operation
- Characterized with Series Equivalent Large-Signal Impedance Parameters
- In Tape and Reel. R6 Suffix = 150 Units, 56 mm Tape Width, 13-inch Reel. R5 Suffix = 50 Units, 56 mm Tape Width, 13-inch Reel.

9. Replacement parts

9.1 Replacement Pallet mosfet

From the drawing you can see the layout of the pallet.

Remove two welded jumpers to the end, one connected to the splitter and the other connected to the RF combiner and unsolder the bias wire.

Jumper side
splitter (input)

Jumper side
combiner (output)

Unsolder the bias wire and remove the fuse.

Bias wire

Fuse

Remove the M5 socket head screws with setscrew wrench to 4. Make sure the wrench is in good conditions and damaged there may be a risk to run the seat of the wrench can be problematic to disassemble the pallet.

Once removed the old pallet clean fine the complete area from old conductive paste and remove superfluous tin from the board of combinator and splitter.

Take a new pallet, stretch uniformly the conductive paste, do not exaggerate with the pasta because it can escape when the screws are tightened.

Place pallet in its seat, place screws and tighten in crossed mode, so as to tighten evenly. Once done, reinsert the jumpers on splitter and RF combiner.

Jumper side
splitter (input)

Jumper side
combiner (output)

Reconnect the bias wire.

Bias wire

When completed assembly connect the module to a dummy load at 5 Kw if possible next to the CCU of the transmitter 10 Kw (or higher). Then we'll see why.

Feed the module (400Vac o 230Vac).

Take a multimeter by setting for measure DC current and point the ferrule to testing, in place of the fuse and setting with trimmer the Bias current. The value is 1 A at rest.

Multimeter to the place
of the fuse

Trimmer

Fuse

Once calibrated the current, turn off the module, reinsert the fuse, connected the DB-15 cable of "Common Bus" relative at the module you have removed, on the rear panel of same.

Take an "Exciter", possibly with attenuator 6dB in series and up gradually with the power, checking in the menù R.F. Unit xx (xx is the number of module we are calibrating) of CCU if all mosfet absorb same current and working properly.

The maximum difference of absorption beetwen one pallet and the other one must be 2A at the power of 3 Kw. If this difference is greater verify the reason.

Possible causes may be:

- n°1 mosfet who does not work properly;
- pilotage from splitter not correct;
- fuse is not inserted properly.

10. Electrical and mechanical parts

This chapter is an overview of the machine, so you can identify quickly the location of the various electrical and mechanical parts.

10.7 Parallel interface (CSINTREMPJ5K)

10.7.1 Description

A parallel-type interface is mounted on the top of the TX20000U-KLC, in which the different signals are available through terminal blocks (Figure 10-7-1). This interface is connected to the CCU from which it receives the different signals and to which the eventual commands are forwarded.

The card contains digital inputs, digital outputs and analog outputs. Among the digital inputs, a “copy” of all the possible orders that can be given locally to the unit by using the buttons of the control unit are displayed.

Figure 10-7-1

The digital outputs supply information concerning the status of the TX20000U-KLC.

The analogue outputs enable the remote control of the most important parameters, for example the forward and reflected power.

This interface was designed for a maximum configurability and adaptability to the tel metry systems to which it may be connected. For example, each digital input can be configured through a jumper in order to be “active” when grounded or when connected to a supply source between +12V and +24V.

The scheme of one generic digital input is shown in Figure 10-7-2 b). Please pay attention to the anti-parallel type optocouplers, so that if the jumper is closed between the pins 1 and 2, by grounding the DIGITAL INPUT, the input is active. On the contrary by closing 2 and 3, the input is active when the DIGITAL INPUT is connected to a positive voltage. Each digital output can be configured individually as “Normally open “ or “Normally closed “ (NO or NC). In Figure 10-7-2 a) the scheme of a generic digital output is shown. Please note that when the jumper is closed between 1 and 2, the output is normally short-circuited with the common pin, while in the other case the circuit is normally open.

It is important to remember that the different commands can be given to the unit through the parallel interface only if the Local/Remote selector situated on the front panel is on the “Remote” position.

Figure 10-7-2

Figure 10-7-3

The following table describes the function of each jumper of the parallel interface. The first column indicates the identifying number of the jumper as shown on Figure 10-7-3, the second indicates the name of the signal and the third column describes its function.

Clamp	Type	Name	Description
JP4/1	In	ON	Corresponds to the ON button of the control unit
JP4/2	In	STDBY	Corresponds to the STDBY button of the control unit
JP4/3	In	OFF	Corresponds to the OFF button of the control unit
JP4/4	In	EXT INH	External inhibition jumper. It is a "N.C." type jumper, which means that it must be active for the TX20000U-KLC to work. Upon delivery, this terminal is closed to ground by a jumper.
JP4/5	In	AUX INH	Auxiliary external inhibition jumper. It is a "N.O." type jumper, which means that it must be not active for the TX20000U-KLC to work. It is "auxiliary" because even if nothing is connected to it the TX20000U-KLC works normally.
JP4/6	In	NOM PWR	Corresponds to the NOMINAL POWER button of the control unit

JP4/7	In	LOW PWR	Corresponds to the REDUCED POWER button of the control unit
JP4/8	In	AUDIO ALARM EXC. 1	Audio alarm of exciter 1. This input, when active, indicates an alarm on exciter 1. If the TX20000U-KLC is in automatic changeover modality, if the exciter 1 is on air and if this signal remains active for a time lag equivalent to the time setted in the Settings menu at line Exc. Wait time, the changeover procedure between the exciters will be started.
JP4/9	In	AUDIO ALARM EXC. 2	Same as AUDIO ALARM EXC. 1 for exciter 2.
JP4/10	/	GND	Grounding contact.
JP8/1	In	ALARM RE-SET	Corresponds to the ALARM RESET button on the control unit
JP8/2	In	RESRV. 1	Reserve 1 input. When this input is active, the failure is registered by the software in the Alarms menu. For example it can be connected to a switch that indicates that the door of the station is open or to a sensor of a power reserve of an electric generator. In this way, by consulting the menus of the unit, it is possible to trace the moment at which (time and date) the failure occurred.
JP8/3	In	RESRV. 2	Same as JP8/2
JP8/4	In	RESRV. 3	Same as JP8/2
JP8/5	In	RESRV. 4	Same as JP8/2
JP8/6	In	EXCITER CHANGE-OVER CMD	This command launches the changeover procedure between the exciters. It has the same function as when you press the OK button when selecting line On air exciter in the menu Exciters. In order to launch the changeover between the exciters through this command, the manual changeover modality should be formerly selected through the correspondent button on the control unit or through the JP8/7 jumper, having however the unit in "Remote" modality.
JP8/7	In	EXCITER CHANGE-OVER	Corresponds to ther EXCITER CHANGEOVER button of the control unit
JP8/8	/	GND	Ground
JP16/1	Out	+12V dc	Power source. A maximum of 100 mA can be absorbed between this jumper and JP16/2. This power source can be used if the user wants to enter the comands following a positive logic (high voltage - active comand)
JP16/2	Out	+12V dc	Same as JP16/1
JP16/3	/	GND	Ground
JP16/4	/	GND	Ground
JP22/1	I/O	TX/RX +	Bus RS 485. Please note that this serial port is operational only when the unit is in "Remote" modality.

JP22/2	I/O	TX/RX -	Bus RS 485
JP22/3	/	LINE TRM	Line termination for bus RS 485
JP22/4	/	LINE TRM	Line termination for bus RS 485
JP48/1	/	GND	Ground
JP48/2	/	GND	Ground
JP48/3	Out	FWD PWR	Forward power. Analogical output, 3.9V for 5000W
JP48/4	Out	RFL PWR	Reflect power. Analogical output, 3.9V for 1200W
JP48/5	Out	OUT AIR TEMP	Temperature of the air at the output of the chimney. Analogical output, 0V for -50°C, 3.9V for 100°C
JP48/6	Out	/	Not used
JP48/7	Out	EFF.	General efficiency. Analogical output, 3.9V for 100%, 0V for 0%.
JP48/8	Out	OUT DAC 6	Reserved for future applications.
JP12/1	Out	CMN MUTE 1	Common contact MUTE 1 (see JP12/2).
JP12/2	Out	MUTE 1	MUTE exciter 1. Digital output, active when exciter 1 is inhibited by the control unit. Like all the digital outputs on the parallele interface, it can be configured through jumper as normally open or normally closed. This output has a common contact dedicated to this function (JP12/1).
JP12/3	Out	CMN MUTE 2	Common contact MUTE 2 (see JP12/4).
JP12/4	Out	MUTE 2	MUTE exciter 2. Digital output, active when exciter 2 is inhibited by the control unit. This output has a common contact dedicated to this function (JP12/3).
JP12/5	Out	CMN LOCAL	Common contact LOCAL (see JP12/6).
JP12/6	Out	LOCAL	LOCAL/REMOTE status. Digital output, active when the TX20000U-KLC is setted in local modality. This output has a common contact dedicated to this function (JP12/5).
JP12/7	Out	CMN MAINS	Common contact MAINS (see JP12/8).
JP12/8	Out	MAINS	MAINS alarm, active when are present problems on the alimentation
JP47/1	Out	AUDIO ALARM	“AUDIO” alarm (see JP4/8 and JP4/9). This output is active when the on air exciter is in audio alarm status. This output has a common contact dedicated to this function (JP47/2).
JP47/2	Out	CMN AUDIO ALARM	Common contact AUDIO ALARM (see JP47/1).
JP47/3	Out	CMN RL3	Common contact shared from the outputs JP38/1-10.
JP47/4	Out	CMN RL3	Parallel contact with JP47/3.
JP35/1	Out	RESRV. 1	Reserve 1. Digitale output, active when the INPUT RESERVE 1 input (JP8/2) is active. The common contact of this output is RL4 (JP35/5)
JP35/2	Out	ON PROTF	Pulse output, every minute is activated when the ProtF is ON. The common contact of this output is RL4 (JP35 / 5)
JP35/3	Out	OFF PROTF	Pulse output, every minute is activated when the ProtF is OFF. The common contact of this output is RL4 (JP35 / 5)

JP35/4	Out	RESRV. 4	Same as JP35/1, corresponds to INPUT RESERVE 4. The common contact of this output RL4 (JP35/5)
JP35/5	Out	CMN RL4	Common contact shared between different digital outputs (JP35/1-4)
JP35/6	Out	SET1.	Digital output, active when the parameter SET1 is active (see menu Settings). The common contact of this output RL5 (JP35/10).
JP35/7	Out	SET2.	Same as JP36/6, corresponds to SET2. The common contact of this output is RL5 (JP35/10).
JP35/8	Out	SET3.	Same as JP36/6, corresponds to SET3. The common contact of this output is RL5 (JP35/10).
JP35/9	Out	SET4.	Similar to JP36/6, related to SET4. The common contact of this output is the RL5 (JP35/10).
JP35/10	Out	CMN RL5	Common contact shared between the different digital output (JP35/6-9)
JP38/1	Out	EXC. ON AIR	Digital output, active when the exciter 1 is on air, and not active when the exciter 2 is on air. common contact of this output is the RL3 (JP47/3).
JP38/2	Out	AUTO/MAN	Digital output, active when the TX20000U-KLC is in changeover mode as regards the exciters. The common contact of this output is RL3 (JP47/3).
JP38/3	Out	LOWER POWER	Digital output, active when the TX20000U-KLC is set for the lower power level. Common contact of this output is the RL3 (JP47/3).
JP38/4	Out	NOMINAL POWER	Digital output, active when the TX20000U-KLC is set for the nominal power level. common contact of this output is the RL3 (JP47/3).
JP38/5	Out	OFF	Digital output, active when the TX20000U-KLC is set for the lower power level. The common contact of this output is the RL3 (JP47/3).
JP38/6	Out	STDBY	Digital output, active when the TX20000U-KLC is set for the lower power level. The common contact of this output is the RL3 (JP47/3).
JP38/7	Out	ON	Digital output, active when the TX20000U-KLC is set on ON mode. The common contact of this output is the RL3 (JP47/3).
JP38/8	Out	FAULT	Digital output, active when the TX20000U-KLC is set on FAULT mode. The common contact of this output is the RL3 (JP47/3).
JP38/9	Out	WAIT	Digital output, active when the TX20000U-KLC is set on WAIT mode. The common contact of this output is the RL3 (JP47/3).
JP38/10	Out	WARNING	Digital output, active when the TX20000U-KLC is set on WARNING mode. The common contact of this output is the RL3 (JP47/3).

10.8 Plate connectors

Ilme male connector, input liquid level alarm of the external unit

N female connector GSM antenna (opz.)

VDE pan for UPS connection.

If you do not have a UPS, make a bridge.

Ilme female connector for power supply fan/s of the external unit

Pinout ilme male alarm input

Pin	Cable color	Description
1	Brown	Minimum level of liquid in the tank
2	Yellow	Common +12V
3	White	Empty tank
GND	Green	Common ground

Pinout ilme female power supply fan/s

Pin	Cable color	Description
1	Black	Fan 1 phase
2	Blue	Common neutral
3	Gray	Fan 2 phase
GND	Yellow-green	Common ground

10.9 Hybrid coupler 1 and 2 (COUP3DB5KT)

Inside view

10.14 Carriage pumps (CARPOMP04)

Single pump	POMMHI205DM
Complete carriage	CARPOMP04

10.15 External unit

Ilme female connector,
liquid level alarm

Pin	Cable color	Description
1	Brown	Minimum level of liquid in the tank
2	Yellow	Common +12V
3	White	Empty tank
GND	Green	Common ground

Ilme male connector for
power supply fan/s

Pin	Cable color	Description
1	Black	Fan 1 phase
2	Blue	Common neutral
3	Gray	Fan 2 phase
GND	Yellow-green	Common ground

10.16 GSM Telemetry (optional)

R.V.R. Elettronica's plug-in series transmitters, may be optionally fitted with the telemetry device that enables the user to remotely check all the machine's working parameters and control some of them, and provides the transmitter with the ability to trigger "alarms" when problems arise while the transmitter is on air, possibly sending GSM Short Messages (SMS) to the maintainer's cellular phone or to any other number stored in the machine's memory.

The telemetry is installed in front of the rack of the transmitter, between the module 3 and 4. The input for the antenna is connected to a first band-pass filter 900Mhz, and is then reported on the roof in the plate connectors.

GSM filter 900 Mhz

The bottom part of the telemetry contains the following connectors:

RS-485	DB9 male connector for connecting the RS-485 bus from the CCU
I2C	DB9 male connector for connecting the I2C bus from the CCU
18-0-18 V	DB15 male to connect power from the CCU

The top of the telemetry contains the following connectors:

Modem	DB 9 female connector connected to the modem internal GSM
RS-232	DB 9 female connector to connect the GSM modem, with telemetry, or to connect with the PC via RS-232 to the transmitter
Reset/prg	Button to reset the telemetry or programming
Fuse 2A	Fuse protection
Fuse 2A	Fuse protection
Power on	The LED on indicates that the telemetry is powered
General alarms	The LED on indicates that the memory of the telemetry alarms are present
Modem present	The LED on indicates that the GSM modem is present and correctly detected by the telemetry
Send sms	The LED on indicates that the GSM modem is sending SMS messages
Modem com.	The LED on indicates that the modem is connected
RS-232	The LED blinks when you connect your PC to the RS-232 telemetry to communicate with the transmitter using the "Telecon 32bit"
Local	The LED on indicates that the transmitter is in LOCAL (via the selector switch on the CCU) and telemetry will not send alert messages or you can remotely connect to the transmitter
Waiting start	The LED blinks for about 45 on first boot. During this period, the telemetry, it analyzes the whole machine to check status and does not send alerts

Note: you need to enter the bridge supplied with the telemetry between the connector MODEM and RS-232 to connect the GSM modem, otherwise will not work

Nota: Please note that to fully deploy the features of this telemetry system, the you will need to sign a contract with a GSM service provider including DATA COMMUNICATIONS.

The use of the telemetry system requires the correct setting of the addresses in the connected pieces of equipment, since they communicate on a shared bus.

Set the Uart address of exciter 1 to "1", exciter 2 to "2".

To make this adjustment, from the main menu of the exciter place the cursor light on the "Admin" and click on it.

Scroll down the menu next to the item "GenSt", click on it and select "Uart Adr." and set it to 1 on the first exciter (the lower) and 2 on the second (if present).

We must now set the address on the CCU, which must be absolutely 3 (this address is already set to factory).

From the main menu (the one that shows the direct and reflected power), press the ESC key and then OK and move the cursor bright, on the "Settings" menu and press OK. Select the line "Talk Address" and press OK, with the UP 'and DOWN keys' set the parameter 3.

10.16.1 Installing and configuring the PC software

You will need:

- A PC running on Windows 98 or newer (the software has been tested with 98, NT, 2000 and XP)
- The “Telecon 32bit” CD ROM, provided with the machine
- DB9 pin-to-pin cable long enough to link the PC to the TLC5KPS

Insert the CDROM in the PC, browse and executethe program setup_telecon.exe.

Follow the instructions on screen to install the software on your PC.

Then run the program Station_upgrade.exe, which will update the list of stations.

Follow the instructions on screen to install the update.

Please note that if you already have an installed version of the Telecon32bit software, the new software will just upgrade it and will not affect you installed station database.

WARNING: The transmitter must be in REMOTE otherwise there can't be connected to the telemetry.

Launch the Telecon program: Start -> Programs -> Telecon 32bit

You will be presented with the database selection screen.

On the Database combobox (the top line), select the PLUGIN_AMP.MDB database.

Then select the station TX20KwLC2ptx station and click on “Edit Phonebook”.

This will open the following screen

The first time will need access to the telemetry via the DB9 cable, so you can set the details of the station and telephone numbers to which messages will be sent.

Plug the cable into a PC serial port (for those who no longer have the serial port you can use a USB - RS-232 converter, not supplied), and the other end is connected to the RS232 port of the telemetry (if it has already been added to the bridge between the modem and RS-232 remove)

Set the following parameters:

Com: select the serial port in use on the PC (COM1,COM2,ecc...)

Baud: is the speed of the serial port, should always be 9600 otherwise it will you communicate

Type: is the type of connection between PC and telemetry, in this case, select "Cable"

Press the button "Return" at the top right and return to the main screen.

Press the “Start Connection” and at this point will be the link.
This will display the following screen.

If everything is done correctly it will open the following screen.

Click 2 times on the top item on the left “(01) TLC5KPS” (in this box are listed all the devices connected to the machine via I2C BUS, in this case we are querying the telemetry) with the left mouse button, opens a drop down menu and click the last entry “EEprom”.
A screen will open, click on button “Read EEPROM” and the question “Are you sure?” press OK.

Begin reading the data in the EEPROM. The blue squares at the bottom, showing what progress has been reached, the reading of the EEPROM.

When the blue bar is full, you will see the following screen.

The screen that opens shows the inside pages of different settings, but those that we have to compile us, are the first two, “General” and “Telephone”.

GENERAL

Station ID	Identification of the address of the transmitter, usually 1
Station Name	Mnemonic name of the station, like place or frequency, this name will be displayed in the SMS message you will arrive
Dial String	Normally ATDT
Number of Retry	Number of messages to send. We suggest to set this value to at least 2, in case of problems with the SMS Service Centre.
Service Center Number	Service center number of your mobile operator Note: before the number, there must always be the international prefix of the state where you are eg. +39 For Italy

Clicking on the various fields you can change their values.

TELEPHONE

1.....10	Memory location where you save the phone number
Phone Number	Telephone number to which messages are sent Note: before the number, there must always be the international prefix of the state where you are eg. +39 For Italy
SMS	Yes: the SMS message in case of alarm, is sent to the number set No: the SMS message in case of alarm, will not be sent to the number set
ACS	Yes: the number set, can be sent to telemetry, via SMS requests for information or modify parameters No: the number set, can not send telemetry, via SMS requests for information or modify parameters
Modem	Select the type of modem used, in this case GSM

Clicking on the various fields you can change their values.
The possible combinations of parameters SMS and ACS are:

SMS	ACS	
Yes	Yes	OK
Yes	No	OK
No	Yes	Condition not possible
No	No	OK, but the number set will be ignored

Once completed these settings, click on “Write EEPROM” to write in the memory, when asked answer OK

Start writing data into the EEPROM. The blue squares at the bottom, showing what progress has been reached, the writing of the EEPROM.

Once you have finished writing, press the button “Exit” to return to the main screen as well.

Now press “Details” in the upper right and will open the following screen.

Through this screen and possible see all the parameters of trsmettitore as if you were in front of the machine: forward power, reflected, unbalanced, frequency, see the status of the LEDs, you can turn it off, turn it on, reset alarms and exchange the exciters. To exit this screen press the X in the upper right.

Back to the main screen, select the entries in the top left, you can view the parameters of the devices inserted in the machine: eccitatore 1 e 2, control unit, RF combiner, pump control, RF unit 5KW.

On the left side there are 3 buttons: Measure, I / O and General. Each displays different information (not always all 3 are available for all devices).

“Measure” contains all the measures questioned apparatus (eg, measurements of currents, voltages, temperatures, etc. ...).

“I / O” indicates the status of its internal relay system questioned.

“General” contains general information about interrogated apparatus (frequency, forward and reflected power and so on ...).

In the “Measure” and “General”, by moving the mouse cursor over the various lines of information, appears Simble prohibition red, this indicates that you can not change that value.

The only screen where you can change the values, is that “I / O,” in which, positioned over several lines, a blue arrow appears, this indicates that you can change that value. Is possible, always on the “Measure” and “General”, which appears a yellow exclamation mark, this indicates that the relevant measure is outside the range of accepted values.

Example: tab “Measure” PTX

The screenshot shows the software interface for the TX20000U-KLC. The title bar indicates 'Connection: TX10kwLC2ptx'. On the left, a list of devices is shown: (01) TLC5KPS, (01) PTX30LCD#1, (02) PTX30LCD#2, (03) CONTROL UNIT, (04) RF COMBINER, (05) PUMP CONTROL, and (06) 5 KW LC RF UNIT. The 'Measure' tab is selected, indicated by a red arrow. The main area displays a table of measurements for the selected device (PTX30LCD#1).

Type	Measures	Measure
In 5	RDS	0 %
In 2	Modulazione	40 KHz
In 6	Varicap Voltage	7.33 V
In 7	Negative Voltage	-11.35 V
In 8	LCD Inverter	8.62 V
In 9	Internal 15V	15.25 V
In 10	CPU Voltage 5V	5.08 V
In 13	Pa Voltage	3.91 V
In 14	PA Current	0.04 A
In 17	Dirver Voltage	1.37 V
In 18	Driver Current	0.0 A
In 19	Temperature	26.73 °C
InD 24	External Interlock	RF Muted
Out 0	% Power Out	51.4 %

On the right side, there are buttons for Modify, Detail, Phone, Help, Print, Alarm, and Exit. At the bottom, there is a status bar showing the date and time (venerdì, 27 mag 2011 10:06:54) and a Recorder section with playback controls. The Communication section shows TX and RX indicators, and the Selection section shows 1 and 1.

Example: tab "I/O" PTX

Example: tab "General" PTX

Clicking on the date on the bottom left is possible, write in the telemetry time and date (the same set on computer), so that if there are alarms can be known with precision time and date on which the event occurred.

Once you click on the confirmation date is asked to do this, answer "Yes".

Also from the main screen, clicking on the "Alarms", a screen opens where you can view the alarms (to display the list, click on the "+" next to TLC5KPS)

From this screen you can also reset the alarms.
Clicking on the “Remote Reset Alarms” resets the alarms stored in the telemetry.
You will be asked the following question, answer “Yes”.

Clicking on the “Reset Alarms Database” deletes the alarm list on this screen the program.
You will be asked the following question, answer “Yes”.

Click on the “Return” at the bottom to return to the main screen.
Press the “Exit” to return to the selection of the type of transmitter.

Then disconnect the RS-232 cable by the telemetry, and reconnect the bridge MODEM - RS-232. Now you can connect remotely to the transmitter, using a GSM modem connected to your PC, or via phone to verify that everything works correctly.

Press the “Exit” to exit permanently from the program.

Leave the transmitter in “REMOTE” if you do get warning messages or be able to connect remotely via PC or mobile phone

Checked in the “Modem” menu of the CCU, if where they have been properly stored the data entered (see chap. 5.1.13)

10.16.2 Dial-up via PC

WARNING: The transmitter must be in **REMOTE** otherwise there can be connected to the telemetry.

Launch the Telecon program: Start -> Programs -> Telecon 32bit

You will be presented with the database selection screen.

On the Database combobox (the top line), select the **PLUGIN_AMP.MDB** database.

Then select the station **TX20KwLC2ptx** station and click on “Edit Phonebook”.

This will open the following screen

Connect the GSM modem to a PC serial port (for those who no longer have the serial port you can use a USB converter - RS-232, not supplied).

Set the following parameters:

Telephone Number: set the phone number of the SIM present in the GSM telemetry, of transmitter, we want to control (**Note: there is always the number in front of the international prefix of the state where you are eg. +39 for Italy**).

Com: select the serial port in use on the PC (COM1, COM2, ecc...)

Baud: is the speed of the serial port, should always be 9600 otherwise it will you communicate

Type: is the type of connection between PC and telemetry, in this case, select "GSM"

Press the button "Return" at the top right and return to the main screen.

Press the "Start Connection" and at this point will be the link.
Now follow the steps previously listed.

10.16.3 Dial-up via mobile

The commands that can be sent to the transmitter using SMS messages are as follows:

Command	Reply	Description
INFO	Station: "station name"- ID: "ID number"- FWD: "value"- RFL: "value" UNBAL: "value" TX On (or TX Off or TX StdBy)- Low Power / <i>Nom Power</i> Audio Present / Audio Absent Alarm Present / Alarm Absent	Information about the transmitter's status
TXON	Station: "station name"- ID: "ID number"- TX is On -	Switching on the transmitters
TXOFF	Station: "station name"- ID: "ID number"- TX is Off -	Switching off the transmitters
LOWPWR	Station: "station name"- ID: "ID number"- LowPwr OK-	Low power setting
NOMPWR	Station: "station name"- ID: "ID number"- NomPwr OK-	Nominal power setting
ALARM	Station: "station name"- ID: "ID number"- Alarm: "List of the alarms in memory"-	List of the alarms in memory
RESET	Station: "station name"- ID: "ID number"- ALARM RESET OK-	Resetting the alarms in memory

Every time you send a command must always return back a reply message, to confirm that the command was received and executed.

The reply message may arrive within a maximum time of 5 min. After this time the command is void.

These commands can be sent only if the telephone number used is in memory of the telemetry and the parameter "ACS" is set to "Yes".

WARNING: The transmitter must be in REMOTE otherwise not receive any command.

10.16.4 Alarms

These are the alarms that the transmitter can send:

1	Foward Power	The power has dropped below the value set in PWG2 (menu settings of the CCU)
2	Reflected Power	The power has risen above the value set in PWG4 (menu settings of the CCU)
3	Unbalanced Power	The power on the dummy load has exceeded the 3500 W
4	No Audio PTX1	No audio input to PTX1
5	No Audio PTX2	No audio input to PTX2
6	Mains Fault (solo se è presente l' UPS)	Is no longer the power supply, the transmitter is turned off, the UPS takes on the logic control, modulators and telemetry
7	Water Level Min	The liquid in the tank has reached the minimum level - Refill as soon as possible
8	Water Level Low	The tank is empty, the transmitter is turned off - It 'requires operator intervention
9	Flux	There is no flow of fluid in the circuit, the transmitter is turned off and start the automatic exchange pumps - It 'requires operator intervention
10	Mains OK	It is not an alarm, is sent the first time you turned on the telemetry or when the mains voltage returns

10.17 Derating of the system

In case of failure of one or more modules of 5 kW, which implies unbalanced power (available on the second screen menu RF Combiner) over 1500 W on dummy loads 1 and 2 (the two powers must be added) or 2500 W the load Big Load for a time longer than 1 min., it turns on the “derating”, which leads to a lower power output from the transmitter, to a value of about 3600 W.

This state persists for 1800 sec. After this time the CCU restores the nominal power. If the unbalanced power, still exceeds 1500W on dummy loads 1 and 2 or 2500 W the load Big Load, the derating procedure is repeated.

If you do not want to wait until the time of the procedure, press “OK”.

11. Installation

11.1 Transmitter connection

First check that the apparatus has not been damaged in transport.

Verify the integrity of the mechanical parts and control that these not been left at the mercy of climatic agents.

Once removed the packaging protections, place it in the position you want it to run.

Fix on the floor with the screws (x4) positioned in the corners at the base of the rack.

Climb the external cooling unit ensuring the brackets to the wall in a convenient location to connect the hydraulic hoses and electrical connections from the apparatus.

Supplied to the radiator are provided two brackets that can be used for the purpose.

IMPORTANT: when climbed the radiator make sure that the height of the inlet and outlet of the liquid, are always at least 30 cm higher than the pipes placed on the top of rack. In addition, the tubes must always follow a path down, and never, up This is let to facilitate the loading of the liquid and to create a smooth flow.

After mounting the radiator to connect pipes from the outdoor unit for cooling liquid and remember to put the gasket provided on the transmitter.

Photos with gasket mounted

For the connection of the tubes respect the blue and red, on the outdoor unit are marked with colored sheath for the identification.

Make sure that the tubes that leave from the outdoor unit, proceed up the transmitter always down to facilitate the loading of the liquid. It may be recommended to mount the cable tray.

On the transmitter always observe the color red and blue.

Once connected to the tubes, connect the two power cables from the outdoor unit to the top of the transmitter, you can not reverse because they are both male-female. The two wires are interchangeable as they are pin-to-pin. These cables are used to bring power to the radiator fan and the signals of the level of liquid in the tank.
Photos of the connection of external unit.

Photo of the cable connection on the transmitter.

Be sure to open the taps and removing the cap of the vent valve of the outdoor unit.
Fill the liquid tank of external unit.

On the cooling unit is a placed level indicator, when there is no liquid, the red float, it will be on a low level.

When the red float will be red on an high level, it means the tank is full.

Open, on the top of the machine, the cover in order to access to the input terminal block and connect the power supply (make sure it's the same with which the machine has been created, threephase 380 or threephase 220, 50 or 60 Hz, otherwise it could seriously damage).

CAUTION: The connection of the machine to the electric alimentation is performed fixing to a 5 poles cable with bare terminals to a terminal block. Making sure without any possibility of error that the cable is not under tension while working on it. Always on the top, on the plate connectors, put the VDE bridge or the UPS (opz.) and turn it on, otherwise the control logic will not work.

Once connected the electric alimentation, turn on the automatic services (BRAKER SERVICES) to power the machine.

Check the menu “cooling” of the CCU, the “Mains”, which should be “OK”, otherwise if there is “Alr” means that the RST phases are not in the correct order, to solve the problem simply invert two phases.

At this point we need to bleed the pumps, is necessary to remove the air from the circuit of the liquid, to do this pull the carriage pumps, from the base of rak.

Loosen the bolt located above the two pumps, placing the paper under in order to absorb any liquid outputs (VERY IMPORTANT, DO NOT REMOVE THE BOLT COMPLETELY, BUT ONLY LOOSENED, BECAUSE THE LIQUID, COULD DAMAGE THE MACHINE LOCATED ABOVE THE PUMP),done this it will go out the whole residual air of the circuit.

At this point, turn on the pumps: go on and contactors PUMP 1 and PUMP 2 positioned on the electromechanical section, and move the small lever on them to close the contact by pushing alternately, to run well pumps. Try for about a minute and if the flow is not "ok" pause and repeat the procedure loosening the bolt located on the pump and let out air again.

THIS OPERATION HAS TO BE REPEAT MINIMUM 4 -5 TIMES, TO DO THIS HAVE A GOOD FLOW OF LIQUID, IN THE MEANTIME YOU SHOULD ALWAYS MAKE SURE THAT THE TANK IS ALWAYS FULL, OTHERWISE YOU MUST ADD THE LIQUID SUPPLIED.

ONCE THE CIRCUIT IS LOADED CORRECTLY, YOU WILL SEE COOLING IN THE MENU, THE FLOW WILL BE GIVE YOU "OK" AND THE TWO LEVELS OF THE TANK WILL BE "OK".

Once loaded well liquid circuit turn left for 30/40 minutes without power, to remove any air bubbles and constantly check the fluid level in the tank of the radiator and add if necessary. Remember to close the cap of the vent valve external unit. Connect the antenna cable.

The coolant can be supplied with the machine:

- AGIP ECO PERMANENT

The following are the technical characteristics of liquid.

11.1.1 Datasheet coolant

AGIP ECO PERMANENT

AGIP ECO PERMANENT is a biodegradable, Nitrite-Amine-Phosphate free product, easy-use for direct application, i.e. without dilution with water, as a coolant in the radiator systems of all types of vehicles, including heavy trucks. To obtain the full advantages of the high performance of this product, it is advisable not to mix it with other types of antifreeze.

CHARACTERISTICS (TYPICAL FIGURES)

AGIP ECO PERMANENT

Boiling point	°C	108
Freezing point	°C	-40
Colour	-	turquoise
Mass density at 15°C	kg/l	1,078

PROPERTIES AND PERFORMANCE

- AGIP ECO PERMANENT has a very low freezing point, which means that it can be used in all types of climate, all the year round.
- It is a long-life fluid which remains stable during storage as well as in use. It can therefore remain in service for long periods without having to be changed.
- It is not acidic, and so does not damage metals, even those most readily affected, such as aluminium, copper and soldering alloys.
- Its considerable alkalinity reduces any tendency towards corrosion, even after long periods of service.
- Its special anti-rust properties prevent damage to any ferrous metals with which it comes in contact.
- The special formulation prevents scale formation in cooling system components, even at high circulation velocities.
- Antifoaming properties also contribute to good heat exchange between the fluid and cooling system components, even at high circulation velocities.
- It does not cause swelling in rubber components of cooling systems.
- It has a high boiling point which ensures continued performance even under severe service conditions.
- Its inherent anti-cavitation properties, either in the pump or in the cylinder block, make it particularly suitable for applications where cavitation is likely to be a problem, e.g. in high-power engines, in cooling systems with high circulation velocities, or in diesels where vibration can cause problems.

SPECIFICATIONS

AGIP ECO PERMANENT meets the requirements of the following specification and tests:

- ASTM D 3306, general performances
- ASTM D 2570, simulated service corrosion test
- ASTM D 4340, aluminium corrosion under heat-rejecting conditions
- BMW 291-A, sludges and corrosion test
- CUNA 956-10, rubber compatibilità
- Maserati

11.2 First start in power

After loading the circuit of the liquid and the air removed, checked that everything is OK in the menu Cooling and connected the antenna you can go on power.

Putting exchange exciter in manual (press the corresponding button on the front panel of the CCU, thus turning on the LED MANUAL) and make sure the two ptx are zero power, and set the correct frequency. Set Tx ON, check in the menu Cooling if the pump is turned on and the indication Flux it's OK.

Go in the settings menù and set the power to the desired value, ex. 20Kw.

Verify that the 5 Kw modules are ON and that the internal power supplies generate a VPA voltage of 20 volts (RF menu Units 01-02)

Then go to the Service menu, get power for exciter 1 to about 10-12 watts of excitement and you will see that the modules will lead to a power of 750-800 W for about 15-20 seconds, then will rise, the VPA voltage, from 20 volts to 50 volts, At this point you have unlocked the power supplies and if there are no problems of ROS or FOLDBACK, the modules of power will rise the power until they reach the power set in the Settings menu over 2 / 3 watts to keep the saturation of amplifiers foldback.

Remember to check that the parameters match the test card, attached to the machine. If there were significant differences it may be that the antenna or the filter cavity are incorrect. Once the machine arrived at the power set and everything is ok, go on the trimmer on the front panel of the individual amplifiers (PWR ADJ located between the LEDs) and set it up as the single amplifier down of 50 watts, In this way, even in situations of power surges the machine will not go up ever. Set the exciter 2 at the same power of exciter 1, if present. Set exciter exchange automatically, even if only one exciter. Put the final in REMOTE if you want to operate the GSM Telemetry (if installed). If there is too unbalanced power on the dummy load inside the machine, operate on Phase ADJ control on the front panel of the CCU (see Chap. 5.3 for explanation). Check that the parameters of the machine remain stable.

11.3 Ordinary maintenance

Check once every two months that the liquid in the tank at the proper level. Indications are displayed in the menu cooling.

If you should have lowered the level, top up with the same type of liquid with which the machine has been supplied.

Revision History

Date	Version	Reason	Editor
23/04/2012	1.0	First version	Nicolini D.
26/07/2012	1.1	Updating PSL5060 board	Nicolini D.
18/09/2012	1.2	Adding information	Nicolini D.
14/05/2015	2.0	New vesion of PJ5000U-KLC	Nicolini D.
